

KNOW YOUR WATER

Where does the water from your tap come from? Follow these steps to make sure your water is clean and safe!

- Public water systems send a yearly Consumer Confidence Report (CCR) on July 1st in your water bill.
- Private systems should have their water tested by a state-certified lab at least once a year.
- After reviewing your water quality, you might decide to install a filter for your faucet. Different filters are effective against different contaminants, so it is important to pick a filter that is the right choice for your water.

For guidance on understanding your CCR, visit [Understanding your Water Quality Report \(epa.gov\)](https://www.epa.gov/understanding-your-water-quality-report)
