RESOURCE AND PATIENT MANAGEMENT SYSTEM

RPMS Electronic Health Information (EHI) Export

(BREH)

User Manual

Version 1.0
September 2023

Table of Contents

Preface

The purpose of this manual is to provide technical information about the Resource and Patient Management System (RPMS) Electronic Health Information (EHI) Export v1.0 (BREH) package.

BREH is designed to generate an EHI export using a predefined national schema, which is published on the Indian Health Service (IHS) website. The BREH national schema includes all patient health information as defined by the Office of National Coordinator (ONC) 2015 Edition Cures Update and the 21st Century Cures Act (21 CCA).

# 1.0	Introduction

The BREH application is a component of the IHS RPMS software. The application allows users to generate an EHI export using a predefined national schema for a single patient or for a patient population. The national schema consists of the patient's EHI that can be stored in the Electronic Health Record (EHR) at the time of the BREH release. These exports meet the ONC 2015 Editions Cures Update and 21 CCA certification specifications.

> **Note:** Although the EHI export generates using a predefined national schema, the BREH application provides sites with an option to create their own schema. Site-defined schemas are based on the national schema.

EHI means Electronic Protected Health Information (ePHI) as defined in *45 CFR 160.103* to the extent that it would be included in a Designated Record Set (DRS) as defined in *45 CFR 164.501*, regardless of whether the group of records are used or maintained by or for an entity covered by the Health Insurance Portability and Accountability Act (HIPAA) Rules.

The DRS, as defined in the HIPAA Rules (*45 CFR 164.501*), consists of the following:

- Medical records and billing records about individuals

- Enrollment, payment, claims adjudication, and case or medical management record systems maintained by or for a health plan

- Other records that are used, in whole or in part, to make decisions about individuals

> **Note:** The term record means any item, collection, or grouping of information that includes protected health information.

The EHI export does not include the following:

- Psychotherapy notes as defined in *45 CFR 164.501*

- Information compiled in reasonable anticipation of, or for use in, a civil, criminal, or administrative action or proceeding

The Security categorization for this application is HIGH in accordance with Federal Information Processing Standard (FIPS) 199. Security controls used in this application adhere to those outlined in the System Security Plan (SSP) for RPMS (SSP 06-02) with specific details as follows in this document.

Throughout this manual, sample computer dialogues are included to illustrate the performance of various menu options and steps. Within these dialogues, computer-generated text appears in gray-shaded boxes. User responses in these dialogs appear in bold type.

> **Note:** This manual does *NOT* contain any real patient, provider or user data. All patient, provider or user related information in computer-generated text, tables, figures, and images throughout this manual contain demo data only.

2.0   System Navigation

The BREH application has no RPMS menu option for users. Instead, it has its own menu structure, which is accessible from the programmer's prompt when appropriate security keys are assigned to the user.

2.1   Accessing BREH Main Menu

The BREH Main Menu allows users to:

- Access two sub menus (with a total of six sub menu options)

- Generate a BREH EHI Export

- Edit BREH Settings

- Enter EHI Demo Patients

- BREH Schema Menu

- BREH Exception Menu

- Real World Testing Reports

Users with the appropriate access (defined in Section 3.0) can sign into the BREH Main Menu by entering programmer mode and typing the following command from the programmer's prompt: **D EN^BREHMENU**, as shown in Figure 2-1.

```

5.  BREH Exception Menu...
6.  Real World Testing Report

Select number or return to quit:  (1-6):
```

Figure 2-2: BREH main menu

3.0   Package Management

3.1   Roles

The BREH application is designed to support two roles:

- Regular users who are permitted to access the BREH Main Menu, enter/edit/import/export schema information, and create site and patient exceptions.

- Elevated users who can perform the same tasks as regular users but can also generate an EHI document for a patient or patients.

3.2   Security Keys

The BREH application includes security keys that control access to the BREH menus, allowing users to perform the functionality based on their role. Table 3-1 lists the security keys included with the BREH application.

In addition to these BREH keys, users also need to be assigned the **XUMGR** and **XUPROG** keys. Finally, in order to make the BREH application more secure, only users who have programmer access are able to access the BREH menu structure. In User Management, users must have an **@** assigned for the FILE MANAGER ACCESS CODE in order to access the BREH menus and functionality.

Table 3-1: Security Keys included with the BREH application

Key Name	Descriptive Name	Description
BREHZMENU	Menu Access Key	This key will permit a user to access the BREH menu system, enter/edit/import/export schema information, and create site and patient exceptions.
BREHZGEN	Export EHI document Key	This key will permit holders of the BREHZMENU key to also generate an EHI document for a patient or patients.

3.3   Edit BREH Settings

The **Edit BREH Settings** option (Figure 3-1) option allows a site to define the time zone they are affiliated with, and if their site utilizes daylight saving time.

1. At the **BREH Main Menu** prompt, select a **number** or insert a **return** to quit. For example, user enters **value 2** (Figure 3-1).

The system displays a **Time Zone** prompt, in which the user can enter **?** to view a list of **time zone values** to choose from.

> **Note:** The list of values that display are time zones that are converted from GMT (Greenwich Mean time), which is the world's observation-based time standard.

2. Enter the **value** that is appropriate for the site. For example, enter **-0700** and click **Enter**.

3. At the **DST prompt** the system defaults to the value **Yes**. Click **Enter** to leave the default value or enter **?** to display a canned value set.

   The value **1 = Yes** and **0= No**. Some states, for example Arizona, do not use **daylight saving time**. At the prompt enter, **N/No** or **0** and click **Enter**.

```
NOW EDITING BREH EHI SITE PARAMETERS:
TIME ZONE: -0700//
      Choose from:
      EASTERN TIME -0500
      CENTRAL TIME -0600
      MOUNTAIN TIME -0700
      PACIFIC TIME -0800
      ALASKA TIME -0900
      HAWAII-ALEUTIAN TIME -1000
TIME ZONE: -0700//
DST: YES/
      Choose from:
      1         YES
      0         NO
DST: YES//
RPMS EHI EXPORT (BREH) Main Menu
```

Figure 3-1: Defining a time zone

3.4   Enter EHI Demo Patients Menu Option

Demo patients cannot normally be exported by EHI. However, for testing purposes, demo patient overrides can be entered via this option. These demo patients can be exported when exporting single patients. Patients entered through this menu option are treated as EHI demo patients and will be outputted (when not outputting multiple or all patients), even though they might be considered demo patients.

1. Type a **?** to display the list of currently defined EHI demo patients.

2. To create a new EHI demo patient (Figure 3-2), enter a **PATIENT NAME**, **PREFERRED NAME**, **HEALTH RECORD NO.**, **ID**, or **MBI** at the select prompt.

3. Confirm that you have the correct patient selected.

4. At the prompt **Are you adding Patient Name as a new EHI DEMO PATIENT**, type **Yes** and press **Enter**.

```
NOW EDITING BREH EHI DEMO PATIENTS:

Select EHI DEMO PATIENTS: COFFEE,RONALD WAYNE// ?
    Answer with EHI DEMO PATIENTS
   Choose from:
   DEMO,ADDIE M
   DEMO,PATIENT
   COFFEE,ABIGAIL
   STRUBLE, POLLY-JO SAMANTHA
   COFFEE,RONALD WAYNE
   DEMO,PATIENT EHIINPATIEN

        You may enter a new EHI DEMO PATIENTS, if you wish

 Answer with PATIENT NAME, or PREFERRED NAME, or HEALTH RECORD NO., or
     ID, or MBI
 Do you want the entire PATIENT List? n  (No)
Select EHI DEMO PATIENTS: COFFEE,RONALD WAYNE//TEST,DEMO
                                              F 03-02-1963 XXX-
XX-8943   TST 15649
Are you adding 'TEST,DEMO' as a new EHI DEMO PATIENTS (the 7TH for this BR
EH EHI SITE PARAMETERS)? No// y  (Yes)
```

Figure 3-2: Create a new EHI demo patient

3.5   BREH Schema Menu

The BREH Schema Menu (Figure 3-3) allows a user to import nationally distributed BREH_OIT EHI schemas. Nationally distributed BREH_OIT EHI schemas will be placed in the following publicly accessible URL:

https://www.ihs.gov/rpms/applications/ftp/?parent=&fld=EHI_Schemas

When a new BREH_OIT EHI schema becomes available in the above URL it should be downloaded and imported into RPMS using the **Import Schema File** option (Figure 3-3) described below.

Imported schemas can be used to generate EHI exports which contain updated application file definitions, thus ensuring all of a patient's EHR data is getting exported. The imported schemas can also be used as templates to create custom schema definitions for the site, which can be utilized during the export process.

```
BREH Schema Menu

1.   Import Schema File
2.   Create/Edit/Remove Custom Schema Definition
3.   Generate Schema Export File

Select number or return to quit:  (1-3):
```

Figure 3-3: BREH schema menu

3.5.1   Import Schema File

The **Import Schema File** option allows users to import a schema export file, which can then be utilized at their facility. Make sure the schema export file is placed in an accessible folder location before continuing. Nationally released BREH schemas from OIT can be identified by the naming convention BREH_OIT prefix. To import a schema, please perform the following steps:

1. Enter the **path of the folder** that contains the **schema file** to import.

2. Enter the **schema file** to import. This response can be free text.

> **Note**:   If the schema file has been previously imported you will be
> prompted to replace the existing schema with the one being
> loaded as shown in Figure 3-4. To continue importing the
> schema type **YES**. To cancel, accept the default of **NO.**

```
This option will allow you to import a schema export file
which you will then be able to utilize at your facility

Please make sure the schema export file is placed in an
accessible folder location before continuing.

Enter the path of the folder which contains the schema file to import.

Schema file path: H:\Temp\// H:\TEMP\CHITT\
Enter the schema file to import: BREH_OIT_20230704.TXT

File BREH_OIT_20230704.TXT found in folder H:\TEMP\CHITT\

This schema file has already been loaded in the past
Loaded as schema definition: BREH_OIT_20230704

Would you like to replace the existing schema on file? NO//YES
```

Figure 3-4: Importing a previously imported schema

3. Enter **YES** to confirm that you wish to import the specified schema file. Figure 3-5 shows a typical schema file import.

```
BREH Schema Menu

1.   Import Schema File
2.   Create/Edit/Remove Custom Schema Definition
3.   Generate Schema Export File

Select number or return to quit:  (1-3): 1

This option will allow you to import a schema export file
which you will then be able to utilize at your facility
```

```
Please make sure the schema export file is placed in an
accessible folder location before continuing.

Enter the path of the folder which contains the schema file to import.

Schema file path: H:\Temp\// H:\TEMP\CHITT\
Enter the schema file to import: BREH_OIT_20230704.TXT

File BREH_OIT_20230704.TXT found in folder H:\TEMP\CHITT\

Would you like to import this schema file? NO// YES

Schema import file BREH_OIT_20230704.TXT has been successfully imported
as schema BREH_OIT_20230704 and can now be used for EHI file exports

Hit ENTER to continue:
```

Figure 3-5: Typical schema import example

3.5.2   Create/Edit/Remove Custom Schema Definition

This menu option allows users to create, edit, or remove a schema definition. This schema can then be used to output custom file/field information being recorded at the site. Multiple functions can be performed using this option.

3.5.2.1   Create Schema Definition

Sites have the ability to create their own custom schemas. This can be useful if a site has modified standard patient related data files to store additional patient information captured by their site. A custom schema can be created to include that extra information. Sites can also create their own custom schemas if they wish to generate patient files containing specific patient information. For example, they could create a custom schema that contains only the PATIENT (#9000001) and VA PATIENT (#2) files and then generate EHI documents using that schema which have most of their stored patient demographic information. The following example (Figure 3-6) shows how to create a custom schema definition. In this example the new schema is being copied from an existing national schema definition.

> **Note**: If an EHI document is created using a custom schema definition, that schema definition file must be made available in a publicly accessible location where the patient can retrieve it. In the example below the fictional URL https://www.siteurl.com/publicschema/ has been listed as the public location of the custom schema file.

```
BREH Schema Menu

1.   Import Schema File
2.   Create/Edit/Remove Custom Schema Definition
3.   Generate Schema Export File

This option will allow you to create, edit or remove a
custom schema definition. This
schema can then be used to output custom file/field
information being recorded at the site.
```

```
     Select one of the following:

          C          Create a new schema definition
          E          Edit an existing schema definition
          R          Remove an existing schema definition
          Q          Quit

Please choose what you would like to do: Q// Create a new schema definition

Would you like to copy an existing schema? YES//<Enter>

Please select the schema definition to copy from

Schema: BREH_OIT_20230704//<Enter>
Please enter the name of the new schema.
Schema names must be between 3 and 30 characters in length.
Custom schema names cannot start with 'BREH_'
Schema definitions will be exported as a .txt file with the
name entered here so it should not contain characters not allowed
in OS file names.

Schema export definitions must be placed in a publicly accessible location
so that they can be retrieved by anyone that requests a copy of their
electronic health information (EHI).

The URL entered here will be included in any EHI data files generated using
this Schema Definition.

Enter the publicly accessible URL where this schema will be located:
https://www
.ihs.gov/rpms/applications/ftp/?parent=&fld=EHI_Schemas
  Replace ... With https://www.siteurl.com/publicschema/
  Replace
   https://www.siteurl.com/publicschema/

Copy existing schema 'BREH_OIT_20230704' to new schema 'TESTING'? NO// YES

New schema has been created

Would you like to edit the new schema? YES// NO
```

Figure 3-6: Creating a custom schema definition

3.5.2.2   Edit Schema Definition

Custom schema definitions can be edited by selecting the **Edit an existing schema definition** option within the **Create/Edit/Remove Custom Schema Definition** option. Sub options in this option are shown in Figure 3-7.

```
 This option will allow you to create, edit or remove a
custom schema definition. This
schema can then be used to output custom file/field
information being recorded at the site.

     Select one of the following:

         C          Create a new schema definition
         E          Edit an existing schema definition
         R          Remove an existing schema definition
         Q          Quit

Please choose what you would like to do: Q// Edit an existing schema
definition
```

```
Please select the schema definition to edit

Schema: TESTING//<Enter>

Editing schema definition: TESTING

    Select one of the following:

        A          Add file to schema definition
        C          Add/Change/Remove schema ancillary file definition
        E          Edit file in a schema definition
        R          Remove file from a schema definition
        Q          Quit
```

Figure 3-7: The Edit an existing schema definition options

3.5.2.2.1   Add file to schema definition

The current national schemas contain all patient related files so if a custom schema has been copied from a national schema all known files will be included. This option will allow a site to add their own patient related files to a custom schema definition. Since there are a number of steps that must be taken in order to make a file available for use in the EHI application, if your site does have a custom file or files that you want to include in your EHI output, it is recommended that you submit a ticket to request that the BREH application team assist in getting the file set up so that it can be included in your custom schema definitions.

This option can also be used when sites wish to create their own schema definitions without copying the definition from an existing schema. In the following example (Figure 3-8), a new (blank) schema "CUSTOM SCRATCH SCHEMA" has been created and the option has been used to add the VA PATIENT (#2) and PATIENT (#9000001) files to the custom schema definition. Any EHI document created using this schema definition will only contain a patient's data from these two files.

> **Note**:   For any custom schema that has not been copied from an original BREH_OIT national schema, the file definition used for files in the schema will be the file definition found at the site.

```
Editing schema definition: CUSTOM SCRATCH SCHEMA

    Select one of the following:

        A          Add file to schema definition
        C          Add/Change/Remove schema ancillary file definition
        R          Remove file from a schema definition
        Q          Quit
```

Figure 3-8: Adding files to a custom schema definition

3.5.2.2.2   Add/Change/Remove schema ancillary file definition

This option allows a site to adjust the ancillary file definition utilized by a particular schema. Since this option will rarely be used it is recommended that you submit a ticket to request that the BREH application team assist you in setting up a custom ancillary file definition so that it can be selected in your custom schema definitions. Figure 3-9 shows the screen displayed when selecting this option.

```
Editing schema definition: CUSTOM SCRATCH SCHEMA

     Select one of the following:

         A          Add file to schema definition
         C          Add/Change/Remove schema ancillary file definition
         R          Remove file from a schema definition
         Q          Quit

What action would you like to perform: Q// C  Add/Change/Remove schema
ancillary
 file definition

You can choose to apply an ancillary file definition. Ancillary
file definitions are used to control what fields in pointer files get
output with each field. For example, you could set up an ancillary file
definition that will output the ABBREVIATION (#1) field value for any
files/fields in the schema that point to the STATE(#5) file. If an
ancillary file definition is not chosen, only the top level #.01 field
value of the pointed to entry will be included with the entry. If an
ancillary file definition is chosen, the top level #.01 field plus any
other fields specified in the definition will be included.

Current Ancillary File Definition: <None>

     Select one of the following:

         A          Add/Change current ancillary file definition
         Q          Quit

What action would you like to perform: Q//
```

Figure 3-9: Changing the schema ancillary file definition

3.5.2.2.3   Edit file in a schema definition

For any custom schema definition that was originally copied from another schema, you will be able to choose what version of the file to include in the custom schema definition. When initially created, all files will use the file definitions found in the original copied from schema. If a site has a file that they have modified/enhanced then they can use the **Reset definition to local version of file definition (L)** option to switch the custom schema to use the local file definition (as shown in Figure 3-10). If a file is found in the original copied from schema, you can always use the **Reset definition to copied from schema definition (C)** option to revert back to using the original schema file definition.

```
Please choose what you would like to do: Q// E  Edit an existing schema
definition

Please select the schema definition to edit

Schema: CUSTOM SCRATCH SCHEMA// TESTING

Editing schema definition: TESTING

     Select one of the following:

          A          Add file to schema definition
          C          Add/Change/Remove schema ancillary file definition
          E          Edit file in a schema definition
          R          Remove file from a schema definition
          Q          Quit

What action would you like to perform: Q// Edit file in a schema definition

Please select the file you would like to edit the schema definition for.

Select FILE: VA PATIENT

File: VA PATIENT (#2)
Origin: COPIED FILE

     Select one of the following:

          C          Reset definition to copied from schema definition
          L          Reset definition to local version of file definition
          Q          Quit

Select the edit action to perform for this file: Q// L  Reset definition to
local version of file definition

This option will update the schema to use the local data
dictionary definition for a file. Note that performing this
action may wipe out customizations entered for this schema
file definition.

Are you sure you want to do this? N// YES
```

```
Updating schema to use local copy...
Update completed

File: VA PATIENT (#2)
Origin: LOCAL FILE

     Select one of the following:

          C          Reset definition to copied from schema definition
          L          Reset definition to local version of file definition
          Q          Quit

Select the edit action to perform for this file: Q// Quit

Please select the file you would like to edit the schema definition for.

Select FILE: <Enter>

     Select one of the following:

          A          Add file to schema definition
          C          Add/Change/Remove schema ancillary file definition
          E          Edit file in a schema definition
          R          Remove file from a schema definition
          Q          Quit

What action would you like to perform: Q// Quit

Schema has changed. Need to update schema ancillary file
definitions...

Update Complete

     Select one of the following:

          C         Create a new schema definition
          E         Edit an existing schema definition
          R         Remove an existing schema definition
          Q         Quit

Please choose what you would like to do: Q//
```

Figure 3-10: Changing the file definition to use the local data dictionary rather than the one provided in the schema

3.5.2.2.4   Remove file from a schema definition

This option can be used to remove a file from a custom schema definition. The following example (Figure 3-11) shows how to remove the VA PATIENT (#2) file from the CUSTOM SCRATCH SCHEMA.

```
Please choose what you would like to do: Q// E  Edit an existing schema
definition

Please select the schema definition to edit

Schema: CUSTOM SCRATCH SCHEMA// <Enter>

Editing schema definition: CUSTOM SCRATCH SCHEMA

      Select one of the following:

          A         Add file to schema definition
          C         Add/Change/Remove schema ancillary file definition
          R         Remove file from a schema definition
          Q         Quit

What action would you like to perform: Q// Remove file from a schema
definition

Please select the file you would like to remove from the schema definition.

Select FILE: VA PATIENT

File: VA PATIENT
File Number: 2

Would you like to remove this file from the schema? NO// YES

File VA PATIENT (#2) has been removed from the schema

      Select one of the following:

          A         Add file to schema definition
          C         Add/Change/Remove schema ancillary file definition
          R         Remove file from a schema definition
          Q         Quit

What action would you like to perform: Q// Quit

Schema has changed. Need to update schema ancillary file
definitions...

Figure 3-11: Removing a file from a custom schema definition

3.5.2.3   Remove Schema Definition

Any schema definition, regardless of whether it is a custom or national schema, can be removed. Use the **Remove Schema Definition** option to remove any schema that you no longer want users to be able to select when generating an EHI export. Figure 3-12 shows how to remove an existing schema definition.

```
This option will allow you to create, edit or remove a
custom schema definition. This
schema can then be used to output custom file/field
information being recorded at the site.

     Select one of the following:

        C          Create a new schema definition
        E          Edit an existing schema definition
        R          Remove an existing schema definition
        Q          Quit

Please choose what you would like to do: Q// Remove an existing schema
definition

Please select the schema definition to remove

Schema: BREH_OIT_20230704// CUSTO  M SCRATCH SCHEMA

Are you sure you want to remove this schema? NO// YES

The Schema has been removed
```

Figure 3-12: Removing a schema definition

3.5.3   Generate Schema Export File

This option allows users to export a custom schema definition to a file.

1. Select the schema that you want to export to a JSON file.

2.　Select the Custom Schema to use for this export.

3.　Enter the path of the folder to place the generated schema file.

4.　Confirm that you want to create the schema file.

Copy the generated file to the URL where it will be publicly accessible by patients who receive EHI documents using this schema definition.

Figure 3-13 shows how to export a schema definition.

```
BREH Schema Menu

1.  Import Schema File
2.  Create/Edit/Remove Custom Schema Definition
3.  Generate Schema Export File

Select number or return to quit:  (1-3): 3

Export a Custom Schema definition to a file
Please select the schema that you wish to export to a JSON file

Select the Custom Schema to use for this export: TESTING// <Enter>

Enter the path of the folder to place the generated schema file.

Export folder: H:\TEMP\CHITT// <Enter>

PROCESS INFORMATION

Schema definition:              TESTING
Storage location:               H:\TEMP\CHITT

Would you like to continue? NO// YES

3.6   BREH Exception Menu

The **BREH Exception Menu** option (Figure 3-14) allows for the exclusion of site-level or patient-specific data to comply with HIPAA privacy rules and the formal request from patients to not expose specific health information to other entities.

```
BREH Exception Menu

1.   Define Site Level Exceptions
2.   Define Patient Specific Exceptions
3.   Display Patient and Site Exceptions

Select number or return to quit:  (1-3):
```

Figure 3-14: BREH Exception Menu

3.6.1   Define Site Level Exceptions

This option allows a site to create a Site Exception Profile to be set up or edited. A Site Exception Profile allows sites to omit specific data from an EHI data export for all patients.

This functionality is needed to prevent information specifically excluded from the HIPAA Privacy Rule individual right of access from being included in a requested EHI data output document.

> **Notes:** Information such as the following should not be included in an EHI document:
>
> Psychotherapy notes, which are the notes recorded by a health care provider who is a mental health professional documenting or analyzing the contents of a conversation during a private counseling session and that are maintained separate from the rest of the patient's medical record.
>
> Information compiled in reasonable anticipation of, or for use in, a civil, criminal, or administrative action or proceeding.

During the EHI export process a user can select one or more site exception profiles, as well as individual patient exception profiles(s), to apply to the EHI export being generated.

The steps to create a site exception profile are as follows:

1. The user selects the **Define Site Level Exceptions (1)** option from the **BREH Exceptions Menu**.

2. Enter **YES** to confirm that you want to create/edit a site exception profile.

3. Enter '**C**' to create a new site exception profile. You can also enter '**E**' to edit an existing site exception profile or '**R**' to remove an existing site exception profile.

4. Enter the new **site exception profile name**.

5. Enter the **Exclusion Reason**.

6. If '**Other**' was entered as the **Exclusion Reason**, enter the **Other Exclusion Reason**.

7. When creating a site exception profile (rather than editing an existing profile), enter '**A**' to add a site profile file exception condition. At the **Site Profile Exception File** prompt, enter the file to enter site exception conditions for.

8. Once a file has been entered, the user will be presented with a list of fields in the file. Enter '**J**' to jump to a field number, '**N**' to go to the next page of fields or enter '**S**' to select a field to enter a condition on.

9. Once '**S**' has been entered to select the field, you will be prompted to enter a condition on that field. Valid choices are **NULL**, **CONTAINS**, **LESS THAN** or **GREATER THAN**. You can negate the condition by placing a **'** prior to the condition (so '**NULL** would mean **NOT NULL**).

10. Enter the value to check the field against. To compare to an internal value (pointers/dates), enter an apostrophe (') followed by the internal value to look for.

> **Note**:   When comparing date or date/time fields the internal date value must be entered. Date/Time values should be entered as CMMDDYY.hhmmss where:
>
> C - century - 3 (2000), 2 (1900), 1 (1800)
> MM - Month with possible leading zero
> DD - Day with possible leading zero
> YY - Year with possible leading zero
> hh - Hour (0-23) with possible leading zero
> mm - Minute (0-59) with possible leading zero
> ss - Second (0-59) with possible leading zero
>
> Example: '3050309.030904 would be entered for
>   MAR 9,2005@03:09:04 AM

11. At the **Would you like to enter another field exception check?** prompt, type **YES** to enter another condition for this exception profile or type **NO** to continue.

12. Once you have entered all of the conditions (and typed **NO** at the **Would you like to enter another field exception check?** prompt), you will be prompted to enter the **Condition Check Logic**. The **Condition Check Logic** functions very similar to how searches are performed in the FileMan **SEARCH FILE ENTRIES** option. Each condition entered is assigned a check letter (A, B, C, etc.). The letters are then used as described below to define the logic that will determine if an exception will be entered for a particular entry in a file. If the **Condition Check Logic** returns **TRUE** for an entry, that entry will be excluded.

- For logical **AND** use **&**.

- For **OR**, use **!**.

- Parenthesis can be used. A single quote character (**'**) can be inserted prior to a check letter to not the value. For example: **(A!'B)&C** would be the **condition if (A OR NOT B) AND C**. If the logic returns **true**, the **entry** or **entry subfile** will be excluded from the **EHI** document.

Figure 3-15 shows an example of how to enter a site exception. In this example, a site exception profile has been created to exclude any TIU documents that have not yet been signed. To create the logic to do this two conditions are placed on the TIU DOCUMENT (#8925) file. The conditions are to exclude any entry in the TIU DOCUMENT file for a patient if the entry has either a SIGNATURE DATE/TIME field or a SIGNED BY field that is NULL.

```
BREH Exception Menu

1.   Define Site Level Exceptions
2.   Define Patient Specific Exceptions
3.   Display Patient and Site Exceptions

Select number or return to quit:  (1-3): 1

This option will allow a site to create a site exception
profile to be set up or edited. A site exception profile allows
sites to omit specific data from an EHI data export for all patients.
This functionality is needed to prevent information specifically
excluded from the HIPAA Privacy Rule individual right of access from
being included in a requested EHI data output document.

Information such as the following should not be included in an EHI
document:

(1) Psychotherapy notes, which are the notes recorded by a health care
provider who is a mental health professional documenting or analyzing
the contents of a conversation during a private counseling session and
that are maintained separate from the rest of the patient's medical
record.

(2) Information compiled in reasonable anticipation of, or for use in, a
civil, criminal, or administrative action or proceeding.

During the EHI export process a user can select one or more site
exception profiles as well as individual patient exception profiles(s)
to apply to the EHI export being generated.

Would you like to create/edit a site exception profile? NO// YES

     Select one of the following:

          C          Create a new site exception profile
          E          Edit an existing site exception profile
          R          Remove an existing site exception profile
          Q          Quit

What action would you like to perform: Q// Create a new site exception
profile

Enter the new site exception profile name: TIU DOCUMENT - EXCLUDE UNSIGNED
SITE EXCEPTION PROFILE NAME: TIU DOCUMENT - EXCLUDE UNSIGNED
          Replace <Enter>
EXCLUSION REASON: OTH   Other
OTHER EXCLUSION REASON: Do not include draft documents

New site exception profile 'TIU DOCUMENT - EXCLUDE UNSIGNED' has been
created
```

```
     Select one of the following:

          A          Add Site Profile File Exception Condition
          Q          Quit

Selection: Q// Add Site Profile File Exception Condition

Please select the file you would like to enter the site exception(s) for.

Figure 3-15: Entering a site exception

3.6.2   Define Patient Specific Exceptions

This option allows a site to create a patient exception profile to be set up, edited or removed. A patient exception profile allows sites to omit specific patient data from an EHI data export. This functionality is needed to prevent information specifically excluded from the HIPAA Privacy Rule individual right of access from being included in a requested EHI data output document. More than one exception profile can be created for a patient.

Notes:	Information such as the following should not be included in an EHI document:
	Psychotherapy notes, which are the notes recorded by a health care provider who is a mental health professional documenting or analyzing the contents of a conversation during a private counseling session and that are maintained separate from the rest of the patient's medical record.
	Information compiled in reasonable anticipation of, or for use in, a civil, criminal, or administrative action or proceeding.

To set up a patient exception profile for a patient, please follow these steps:

1. Select the **Define Patient Specific Exceptions** option.

2. At the **Would you like to create/edit an exception profile for a patient?** prompt type **YES**.

3. At the **Name, DOB or Chart# of the patient** prompt enter the patient to create an exception for.

4. Enter '**C**' to create a new patient exception profile for that patient.

5. At the **Enter the new patient exception profile name** prompt enter the new profile name.

6. Enter '**A**' to add a file exception profile for the patient.

7. At the **FILE** prompt enter the file to create the patient profile for (more than one file can be assigned to each patient profile).

8. At the **EXCLUDE ALL FILE ENTRIES** prompt enter **YES** to exclude all of the patient's entries in the file or **NO** to exclude specific entries. If **YES** is chosen, you will then be prompted to enter the **EXCLUSION REASON** and, if '**Other**' was chosen, the **OTHER EXCLUSION REASON**. The exception process for this file for this profile is now complete.

9. If **NO** was chosen in the previous step, at the **Would you like to create/edit/remove exceptions to exclude specific records in this file** prompt type **YES**.

10. Enter '**C**' to create a new entry exclusion.

11. One by one a list of the patient's entries in the file will be displayed. Step through the list until you find the entry you are looking for. Once an entry is found, enter '**E**' to exclude entry (create an exception).

12. At the EXCLUDE ENTIRE ENTRY prompt enter **YES** to exclude the entire entry or **NO** if you would like to exclude specific fields in the entry.

13. You will then be prompted to enter the **EXCLUSION REASON** and, if '**Other**' was chosen, the **OTHER EXCLUSION REASON**.

14. If **NO** was chosen, you will then be able to enter field level exceptions. Enter '**A**' to add a field level exception.

15. You will be presented with a list of fields in the file. Step through the fields until you find the field you are looking for. Once you have located the field you want, enter '**S**' and a field level exception will be entered for that field.

16. Control will return to the previous menu where you can add an additional field level exception or remove an existing field exception.

17. Entering '**Q**' to get out of the field exceptions will return you to the next entry for the patient in the file.

18. You can step back through the menus to create/edit/remove exceptions for that file and to add exceptions for another file.

Figure 3-16 shows a sample patient exception created for a patient's PROBLEM file entries. One of the entries is being completely excluded while another entry has two fields excluded.

```
BREH Exception Menu

1.   Define Site Level Exceptions
2.   Define Patient Specific Exceptions
3.   Display Patient and Site Exceptions

Select number or return to quit:  (1-3): 2

This option will allow a site to create a patient exception profile to
be set up or edited. A patient exception profile allows sites to omit
specific patient data from an EHI data export. This functionality is
needed to prevent information specifically excluded from the HIPAA
Privacy Rule individual right of access from being included in a
requested EHI data output document. Information such as the following
should not be included in an EHI document:

(1) Psychotherapy notes, which are the notes recorded by a health care
provider who is a mental health professional documenting or analyzing
the contents of a conversation during a private counseling session and
that are maintained separate from the rest of the patient's medical
record.

(2) Information compiled in reasonable anticipation of, or for use in, a
civil, criminal, or administrative action or proceeding.

More than one exception profile can be created for a patient. During
the export process a user can select one or more of a patient's
exception(s)
to apply to the EHI export being generated.

Would you like to create/edit an exception profile for a patient? NO// YES

4.0   Package Operation

4.1   Generate a BREH EHI Export

This option allows a user to create an **EHI data export document** for a patient, list of patients or ALL patients.

> **Note:** Every 14 days the system will add an additional question to confirm that you are using the newest schema definition provided by the OIT. If it has been 14 days or more since the user answered **YES** that they checked for a new schema (Figure 4-1). Users will continue to get prompted to answer this question until a user answers **YES** which will reset the 14 counter.

```
In order for all of a patient's information on file to be exported in an
EHI document, the most recent national schema provided by OIT must be used.
Therefore, before extracting a patient's EHI, sites should periodically
check to see if a new schema file has been released. Sites should pull the
most recent schema definition from the public location and import it into
their RPMS system so it can be selected as the definition to use.

Have you checked to ensure you are using the newest schema definition? N//
YES
```

Figure 4-1 Periodic check for new schema message

To generate an EHI export for a patient or patients please follow these steps:

1. The user is prompt to select a **schema**. The system defaults to the latest nationally released schema. Entering a **?** allows the user to view the list of both nationally distributed schemas and locally customized schemas (Figure 4-2).

2. Pressing **Enter** leaves the system default, or you can select the **schema** you want to use by entering its name and pressing **Enter**.

```
Create an EHI export for a patient

This option allows a user to create an EHI data export document for a
patient, list of patients or ALL patients.

Please select the schema definition to use for this export

Schema: BREH_OIT_20230704// ?
     Answer with BREH EHI SCHEMAS SCHEMA NAME, or OUTPUT FILE NAME
    Choose from:
    BREH_OIT_20230607
    BREH_OIT_20230704
    TESTING
```

```
Schema: BREH_OIT_20230704// <Enter>
```

Figure 4-2: Nationally distributed and locally customized schemas

3. At the **DO YOU WANT TO EXPORT 'SINGLE PATIENT', 'MULTIPLE PATIENTS' OR 'ALL PATIENTS'** prompt make the appropriate selection. Note that demo patients can only be exported using the **SINGLE PATIENT** option providing they have been entered as EHI demo patients. Demo patients cannot be exported using the **MULTIPLE PATIENTS** or **ALL PATIENTS** selection (Figure 4-3).

4. Select the patient or patients you wish to generate an EHI document for (Figure 4-3).

```
DO YOU WANT TO EXPORT 'SINGLE PATIENT', 'MULTIPLE PATIENTS' OR 'ALL
PATIENTS': SINGLE PATIENT// SINGLE PATIENT

Converting data to JSON
Exporting JSON data to a file

EHI Export File: EHI_99999_CHITT_20230710_102638_7211.txt
has been created and placed in folder:
H:\Temp\CHITT\
```

Figure 4-8 Generating an EHI export

10. When completed, the file(s) are accessible in the **folder path** (Figure 4-9) defined.

This PC > PUB (H:) > Temp > CHITT >

| Name		Date modified	Type	Size
EHI_99999_CHITT_20230710_102638_7211		7/10/2023 10:26 AM	Text Document	999 KB

Figure 4-9 Sample EHI export file

11. To view the file, utilize **Notepad ++** or a similar application by right-clicking the **file name** (Figure 4-10).
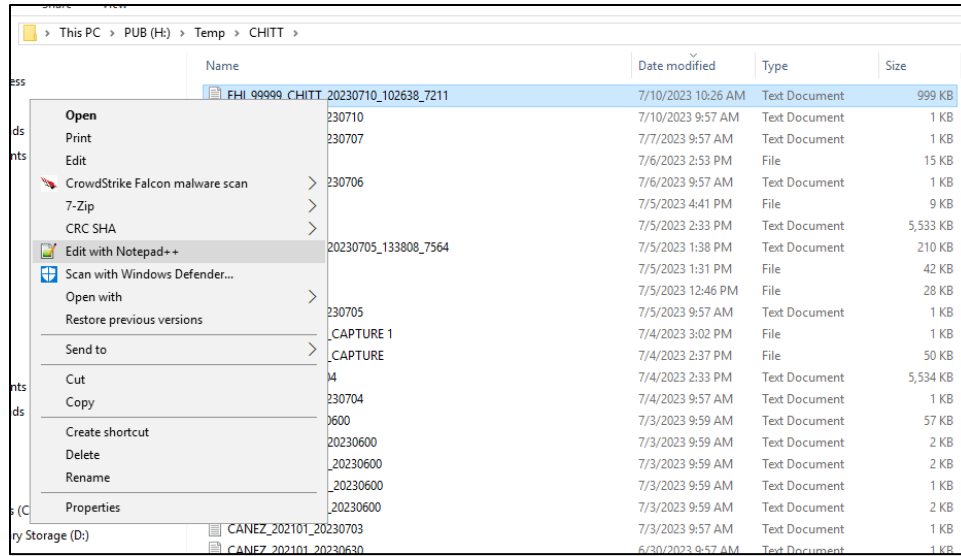

Figure 4-10: Utilizing Notepad ++

12. In **Notepad ++**, click the **Plugin option** in the **toolbar** and select **JSON Viewer**. The system displays the exported data in a treeview (Figure 4-11 and Figure 4-12).

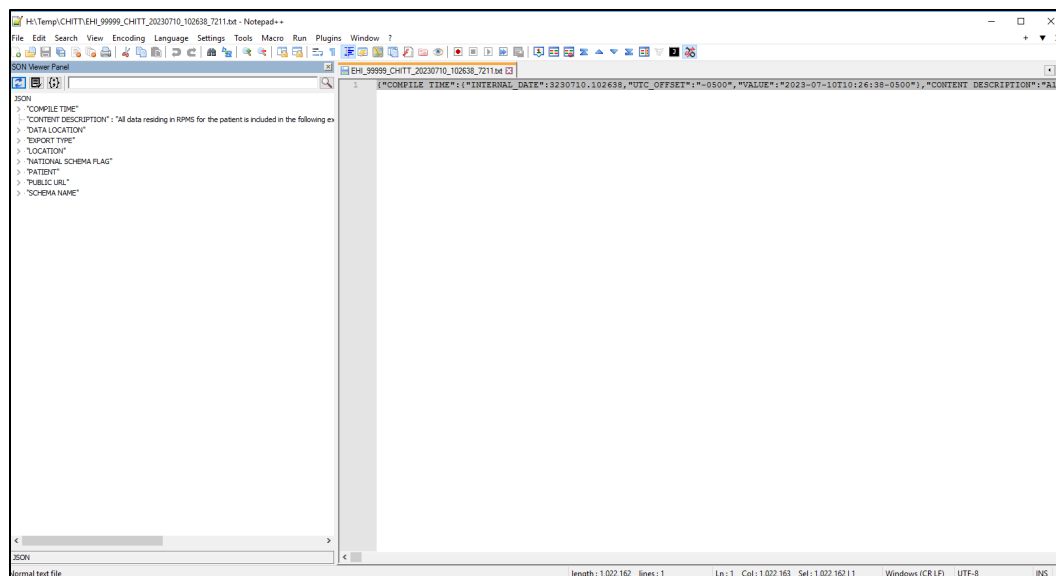

Figure 4-11: JSON Viewer

Figure 4-12: Exported data

4.2   Real World Testing Report

This option generates a **Real World Testing Report** for a selected date range. The report will show the number of EHI documents that were requested, as well as the number of documents that failed to generate. If desired, a listing of successful/unsuccessful EHI documents will be returned.

> **Note:** In order to compile this information, the report logic loops through BUSA auditing information. Because so much information gets audited by BUSA, it is important to run this report for the smallest date range possible (preferably a week or less) since the report could take a long time to compile.

1. The user enters the report **beginning date**. The system allows for the user of **T** for Today and **T-?** similar to other RPMS date fields.

2. The user enters the report **ending date**. The system allows for the user of **T** for Today and **T-?** similar to other RPMS date fields.

3. The user is asked if they want to include **demo patients**. The system default is **No**.

4. The user can display **summary totals** (Figure 4-13) or a detailed list of **patients** and their **file generation status** (Figure 4-14).

5. The user must enter a **device**. The system default is **home** to the screen.

```
Would you like to continue? NO// Y  YES
```

```
Enter the report beginning date: T  (JUN 20, 2023)

Enter the report ending date: T  (JUN 20, 2023)

Would you like to include demo patients in the totals? NO// Y  YES

Would you like to see the report detail showing each record? NO// <Enter>
DEVICE: HOME// <Enter>  Virtual

Figure 4-14: Detailed list of patients and their file generation status

Appendix A   Rules of Behavior

The Resource and Patient Management (RPMS) system is a United States Department of Health and Human Services (HHS), Indian Health Service (IHS) information system that is ***FOR OFFICIAL USE ONLY***. The RPMS system is subject to monitoring; therefore, no expectation of privacy shall be assumed. Individuals found performing unauthorized activities are subject to disciplinary action including criminal prosecution.

All users (Contractors and IHS Employees) of RPMS will be provided a copy of the Rules of Behavior (ROB) and must acknowledge that they have received and read them prior to being granted access to a RPMS system, in accordance IHS policy.

- For a listing of general ROB for all users, see the most recent edition of *IHS General User Security Handbook* (SOP 06-11a).

- For a listing of system administrators/managers rules, see the most recent edition of the *IHS Technical and Managerial Handbook* (SOP 06-11b).

Both documents are available at this IHS website:
https://home.ihs.gov/security/index.cfm.

> **Note**: Users must be logged on to the IHS D1 Intranet to access these documents.

The ROB listed in the following sections are specific to RPMS.

A.1   All RPMS Users

In addition to these rules, each application may include additional ROBs that may be defined within the documentation of that application (e.g., Dental, Pharmacy).

A.1.1   Access

RPMS users shall

- Only use data for which you have been granted authorization.

- Only give information to personnel who have access authority and have a need to know.

- Always verify a caller's identification and job purpose with your supervisor or the entity provided as employer before providing any type of information system access, sensitive information, or nonpublic agency information.

- Be aware that personal use of information resources is authorized on a limited basis within the provisions *Indian Health Manual* Part 8, "Information Resources Management," Chapter 6, "Limited Personal Use of Information Technology Resources."

RPMS users shall not

- Retrieve information for someone who does not have authority to access the information.

- Access, research, or change any user account, file, directory, table, or record not required to perform their *official* duties.

- Store sensitive files on a PC hard drive, or portable devices or media, if access to the PC or files cannot be physically or technically limited.

- Exceed their authorized access limits in RPMS by changing information or searching databases beyond the responsibilities of their jobs or by divulging information to anyone not authorized to know that information.

A.1.2   Information Accessibility

RPMS shall restrict access to information based on the type and identity of the user. However, regardless of the type of user, access shall be restricted to the minimum level necessary to perform the job.

RPMS users shall

- Access only those documents they created and those other documents to which they have a valid need-to-know and to which they have specifically granted access through an RPMS application based on their menus (job roles), keys, and FileMan access codes. Some users may be afforded additional privileges based on the functions they perform, such as system administrator or application administrator.

- Acquire a written preauthorization in accordance with IHS policies and procedures prior to interconnection to or transferring data from RPMS.

A.1.3   Accountability

RPMS users shall

- Behave in an ethical, technically proficient, informed, and trustworthy manner.

- Log out of the system whenever they leave the vicinity of their personal computers (PCs).

- Be alert to threats and vulnerabilities in the security of the system.

- Report all security incidents to their local Information System Security Officer (ISSO).

- Differentiate tasks and functions to ensure that no one person has sole access to or control over important resources.

- Protect all sensitive data entrusted to them as part of their government employment.

- Abide by all Department and Agency policies and procedures and guidelines related to ethics, conduct, behavior, and information technology (IT) information processes.

A.1.4   Confidentiality

RPMS users shall

- Be aware of the sensitivity of electronic and hard copy information and protect it accordingly.

- Store hard copy reports/storage media containing confidential information in a locked room or cabinet.

- Erase sensitive data on storage media prior to reusing or disposing of the media.

- Protect all RPMS terminals from public viewing at all times.

- Abide by all Health Insurance Portability and Accountability Act (HIPAA) regulations to ensure patient confidentiality.

RPMS users shall not

- Allow confidential information to remain on the PC screen when someone who is not authorized to that data is in the vicinity.

- Store sensitive files on a portable device or media without encrypting.

A.1.5   Integrity

RPMS users shall

- Protect their systems against viruses and similar malicious programs.

- Observe all software license agreements.

- Follow industry standard procedures for maintaining and managing RPMS hardware, operating system software, application software, and/or database software and database tables.

- Comply with all copyright regulations and license agreements associated with RPMS software.

RPMS users shall not

- Violate federal copyright laws.

- Install or use unauthorized software within the system libraries or folders.

- Use freeware, shareware, or public domain software on/with the system without their manager's written permission and without scanning it for viruses first.

A.1.6   System Logon

RPMS users shall

- Have a unique User Identification/Account name and password.

- Be granted access based on authenticating the account name and password entered.

- Be locked out of an account after five successive failed login attempts within a specified time period (e.g., one hour).

A.1.7   Passwords

RPMS users shall

- Change passwords a minimum of every 90 days.

- Create passwords with a minimum of eight characters.

- If the system allows, use a combination of alpha-numeric characters for passwords, with at least one uppercase letter, one lower case letter, and one number. It is recommended, if possible, that a special character also be used in the password.

- Change vendor-supplied passwords immediately.

- Protect passwords by committing them to memory or store them in a safe place (do not store passwords in login scripts or batch files).

- Change passwords immediately if password has been seen, guessed, or otherwise compromised, and report the compromise or suspected compromise to their ISSO.

- Keep user identifications (IDs) and passwords confidential.

RPMS users shall not

- Use common words found in any dictionary as a password.

- Use obvious readable passwords or passwords that incorporate personal data elements (e.g., user's name, date of birth, address, telephone number, or social security number; names of children or spouses; favorite band, sports team, or automobile; or other personal attributes).

- Share passwords/IDs with anyone or accept the use of another's password/ID, even if offered.

- Reuse passwords. A new password must contain no more than five characters per eight characters from the previous password.

- Post passwords.

- Keep a password list in an obvious place, such as under keyboards, in desk drawers, or in any other location where it might be disclosed.

- Give a password out over the phone.

A.1.8 Backups

RPMS users shall

- Plan for contingencies such as physical disasters, loss of processing, and disclosure of information by preparing alternate work strategies and system recovery mechanisms.

- Make backups of systems and files on a regular, defined basis.

- If possible, store backups away from the system in a secure environment.

A.1.9 Reporting

RPMS users shall

- Contact and inform their ISSO that they have identified an IT security incident and begin the reporting process by providing an IT Incident Reporting Form regarding this incident.

- Report security incidents as detailed in the *IHS Incident Handling Guide* (SOP 05-03).

RPMS users shall not

- Assume that someone else has already reported an incident. The risk of an incident going unreported far outweighs the possibility that an incident gets reported more than once.

A.1.10 Session Timeouts

RPMS system implements system-based timeouts that back users out of a prompt after no more than 5 minutes of inactivity.

RPMS users shall

- Utilize a screen saver with password protection set to suspend operations at no greater than 10 minutes of inactivity. This will prevent inappropriate access and viewing of any material displayed on the screen after some period of inactivity.

A.1.11   Hardware

RPMS users shall

- Avoid placing system equipment near obvious environmental hazards (e.g., water pipes).

- Keep an inventory of all system equipment.

- Keep records of maintenance/repairs performed on system equipment.

RPMS users shall not

- Eat or drink near system equipment.

A.1.12   Awareness

RPMS users shall

- Participate in organization-wide security training as required.

- Read and adhere to security information pertaining to system hardware and software.

- Take the annual information security awareness.

- Read all applicable RPMS manuals for the applications used in their jobs.

A.1.13   Remote Access

Each subscriber organization establishes its own policies for determining which employees may work at home or in other remote workplace locations. Any remote work arrangement should include policies that:

- Are in writing.

- Provide authentication of the remote user through the use of ID and password or other acceptable technical means.

- Outline the work requirements and the security safeguards and procedures the employee is expected to follow.

- Ensure adequate storage of files, removal, and nonrecovery of temporary files created in processing sensitive data, virus protection, and intrusion detection, and provide physical security for government equipment and sensitive data.

- Establish mechanisms to back up data created and/or stored at alternate work locations.

Remote RPMS users shall

- Remotely access RPMS through a virtual private network (VPN) whenever possible. Use of direct dial in access must be justified and approved in writing and its use secured in accordance with industry best practices or government procedures.

Remote RPMS users shall not

- Disable any encryption established for network, internet, and Web browser communications.

## A.2	RPMS Developers

RPMS developers shall

- Always be mindful of protecting the confidentiality, availability, and integrity of RPMS when writing or revising code.

- Always follow the IHS RPMS Programming Standards and Conventions (SAC) when developing for RPMS.

- Only access information or code within the namespaces for which they have been assigned as part of their duties.

- Remember that all RPMS code is the property of the U.S. Government, not the developer.

- Not access live production systems without obtaining appropriate written access and shall only retain that access for the shortest period possible to accomplish the task that requires the access.

- Observe separation of duties policies and procedures to the fullest extent possible.

- Document or comment all changes to any RPMS software at the time the change or update is made. Documentation shall include the programmer's initials, date of change, and reason for the change.

- Use checksums or other integrity mechanism when releasing their certified applications to assure the integrity of the routines within their RPMS applications.

- Follow industry best standards for systems they are assigned to develop or maintain and abide by all Department and Agency policies and procedures.

- Document and implement security processes whenever available.

RPMS developers shall not

- Write any code that adversely impacts RPMS, such as backdoor access, "Easter eggs," time bombs, or any other malicious code or make inappropriate comments within the code, manuals, or help frames.

- Grant any user or system administrator access to RPMS unless proper documentation is provided.

- Release any sensitive agency or patient information.

A.3   Privileged Users

Personnel who have significant access to processes and data in RPMS, such as, system security administrators, systems administrators, and database administrators, have added responsibilities to ensure the secure operation of RPMS.

Privileged RPMS users shall

- Verify that any user requesting access to any RPMS system has completed the appropriate access request forms.

- Ensure that government personnel and contractor personnel understand and comply with license requirements. End users, supervisors, and functional managers are ultimately responsible for this compliance.

- Advise the system owner on matters concerning information technology security.

- Assist the system owner in developing security plans, risk assessments, and supporting documentation for the certification and accreditation process.

- Ensure that any changes to RPMS that affect contingency and disaster recovery plans are conveyed to the person responsible for maintaining continuity of operations plans.

- Ensure that adequate physical and administrative safeguards are operational within their areas of responsibility and that access to information and data is restricted to authorized personnel on a need-to-know basis.

- Verify that users have received appropriate security training before allowing access to RPMS.

- Implement applicable security access procedures and mechanisms, incorporate appropriate levels of system auditing, and review audit logs.

- Document and investigate known or suspected security incidents or violations and report them to the ISSO, Chief Information Security Officer (CISO), and systems owner.

- Protect the supervisor, superuser, or system administrator passwords.

- Avoid instances where the same individual has responsibility for several functions (i.e., transaction entry and transaction approval).

- Watch for unscheduled, unusual, and unauthorized programs.

- Help train system users on the appropriate use and security of the system.

- Establish protective controls to ensure the accountability, integrity, confidentiality, and availability of the system.

- Replace passwords when a compromise is suspected. Delete user accounts as quickly as possible from the time that the user is no longer authorized system. Passwords forgotten by their owner should be replaced, not reissued.

- Terminate user accounts when a user transfers or has been terminated. If the user has authority to grant authorizations to others, review these other authorizations. Retrieve any devices used to gain access to the system or equipment. Cancel logon IDs and passwords and delete or reassign related active and backup files.

- Use a suspend program to prevent an unauthorized user from logging on with the current user's ID if the system is left on and unattended.

- Verify the identity of the user when resetting passwords. This can be done either in person or having the user answer a question that can be compared to one in the administrator's database.

- Shall follow industry best standards for systems they are assigned to and abide by all Department and Agency policies and procedures.

Privileged RPMS users shall not

- Access any files, records, systems, etc., that are not explicitly needed to perform their duties.

- Grant any user or system administrator access to RPMS unless proper documentation is provided.

- Release any sensitive agency or patient information.

Glossary

Designated Record Set

Defined in the **HIPAA Rules (*45 CFR 164.501*)**, consists of the following:

- Medical records and billing records about individuals.

- Enrollment, payment, claims adjudication, and case or medical management record systems maintained by or for a health plan.

- Other records that are used, in whole or in part, to make decisions about individuals.

Electronic Protected Health Information

Defined in 45 CFR 160.103 to the extent that it would be included in a Designated Record Set (DRS) as defined in 45 CFR 164.501, regardless of whether the group of records are used or maintained by or for an entity covered by the Health Insurance Portability and Accountability Act (HIPAA) Rules.

Acronym List

Acronym	Term Meaning
21 CCA	21st Century Cures Act
ePHI	Electronic Protected Health Information
FIPS	Federal Information Processing Standard 199
GMT	Greenwich Mean time
HIPAA	Health Insurance Portability and Accountability Act
IHS	Indian Health Service
ONC	Office of National Coordinator
RPMS	Resource and Patient Management System
SSP	System Security Plan
