1.0 Introduction

Pharmacy Data Management (PDM) provides tools for managing Pharmacy data. It includes tools for creating Pharmacy Orderable Items and maintaining files necessary for the IHS Electronic Health Record (EHR). PDM consolidates tools for managing the various Pharmacy software products. It provides Pharmacy Supervisors, in one location, the capability to enter and edit data from the local DRUG file (#50) for all Pharmacy related packages. PDM now allows users to enter medication instruction components (e.g., dosage, noun, verb, expansion) in a language other than English. However, at this time, the Patient Medication Information Sheets only allow patient data to be in English or Spanish.

The PDM user manual is designed to acquaint the user with the various PDM options and offer specific guidance on the maintenance and use of the PDM package.

Notations will be used consistently throughout this PDM user manual are outlined below.

- Menu options will be italicized.
Example: The *Drug Enter/Edit* option permits you to enter or edit a drug.
- Screen prompts will be denoted with quotation marks around them.
Example: the “select drug” prompt will display next.
- Responses in bold face indicate user input.
Example: DRUG INTERACTION SEVERITY: **CRITICAL**
- Text centered between bent parentheses represents a keyboard key that needs to be pressed in order for the system to capture a user response or move the cursor to another field.

<**Enter**> indicates that the Enter key (or Return key on some keyboards) must be pressed.

Example: Type **Y** for Yes or **N** for No and press <**Enter**>

<**Tab**> indicates that the Tab key must be pressed.

Example: Press <**Tab**> to move the cursor to the next field.

- **?, ??, ???** One, two or three question marks can be entered at any of the prompts for online help. One question mark elicits a brief statement of what information is appropriate for the prompt. Two question marks provide more help, plus the hidden actions, and three question marks will provide more detailed help, including a list of possible answers, if appropriate.
- ^ (caret or a circumflex) and pressing <Enter> can be used to exit the present option.

2.0 Pharmacy Data Management Options

The PDM options are listed below. Each of these options is explained in detail later in this user manual.

Dosages ...

- Auto Create Dosages
- Dosage Form File Enter/Edit
- Enter/Edit Dosages
- Most Common Dosages Report
- Noun/Dosage Form Report
- Review Dosages Report

Drug Enter/Edit

Drug Interaction Management ...

- Enter/Edit Local Drug Interaction
- Report of Locally Entered Interactions

Electrolyte File (IV)

Lookup into Dispense Drug File

Medication Instruction File Add/Edit

Medication Route File Enter/Edit

Orderable Item Management ...

- Edit Orderable Items
- Dispense Drug/Orderable Item Maintenance
- Orderable Item/Dosages Report
- Patient Instructions Report

Orderable Item Report

Formulary Information Report

Drug Text Enter/Edit

Drug Text File Report

Pharmacy System Parameters Edit

Standard Schedule Edit

Synonym Enter/Edit

Controlled Substances/PKI Reports

DEA Spec Hdlg & CS Fed Sch Discrepancy
Controlled Substances Not Matched to NDF
CS (DRUGS) Inconsistent with DEA Spec Hdlg
CS (Ord. Item) Inconsistent with DEA Spec Hdlg

2.1 Dosages

[PSS DOSAGES MANAGEMENT]

The *Dosages* option controls the entering and editing of dosages. The six dosages sub-options are explained in more detail below.

2.1.1 Auto Create Dosages

[PSS DOSAGE CONVERSION]

The *Auto Create Dosages* option will queue the conversion that populates the Possible Dosages and Local Possible Dosages in the DRUG file (#50). When the *Auto Create Dosages* job is complete, a mail message is sent to the user. The initial creation of these dosages occurred after the setup of patch PSS*1*34; therefore, all subsequent executions of this option are considered a “rerun”.

This option will queue the conversion that populates the Possible Dosages and Local Possible Dosages in the Drug file.

Select Systems Manager Menu Option: PDM Pharmacy Data Management

Select Pharmacy Data Management Option: DOSages

Select Dosages Option: AUTO Create Dosages

This option will queue the conversion that populates the Possible Dosages and Local Possible Dosages in the Drug file.

The dosage conversion was last run by TULSA, LARRY
It started on DEC 07, 2000@15:09:20 and ended on DEC 07, 2000@15:09:34

Are you sure you want to run the Dosage conversion again? N//

Figure 2-1: Example: Rerun Auto Create Dosages

```
Subj: PDM DOSAGE CONVERSION [#81907] 07 Dec 00 15:09 2 lines
From: PHARMACY DATA MANAGEMENT In 'IN' basket. Page 1 *New*
-----
The PDM Auto Create Dosages Job has run to completion.
Please use the Dosages Review Report to print out results.

Enter message action (in IN basket): Ignore//
```

Figure 2-2: Example: Mail Message following completion of Auto Create Dosages

2.1.2 Dosage Form File Enter/Edit

[PSS DOSAGE FORM EDIT]

The *Dosage Form File Enter/Edit* option provides the ability to edit data in the DOSAGE FORM file (#50.606). Changes made using this option may affect the way EHR and Outpatient Pharmacy SIGs display and how Local Possible Dosages are created. The Noun entries are used to populate the Local Possible Dosages for DRUG file (#50) entries, when these entries are matched to National Drug File. These Nouns may be package specific (i.e. Outpatient Pharmacy, Inpatient Medications, or both). Entries in this file will be used as default values in the construction of the Outpatient Pharmacy prescription SIG.

The conjunction will be used to provide a connector between the Local Possible Dosage and the strength and units or Dispense Drug name when displaying the dosage list through CPRS. For example, the dosage 1 TEASPOONFUL GUAIFENESIN WITH DEXTROMETHORPHAN SYRUP would display as 1 TEASPOONFUL OF GUAIFENESIN WITH DEXTROMETHORPHAN SYRUP in CPRS after the conjunction “OF” was provided using the *Dosage Form File Enter/Edit* option.

The *Dosage Form File Enter/Edit* option allows the user to enter a noun, verb, or preposition in a language other than English. PDM does not translate English terms into another language; instead, it allows the user to enter a translation of a term. If a value has not been entered in the OTHER LANGUAGE VERB, OTHER LANGUAGE PREPOSITION, or OTHER LANGUAGE NOUN fields, PDM defaults to the values entered in the VERB, PREPOSITION, or NOUN fields. It is recommended that values not be entered in any of the OTHER LANGUAGE FIELDS. If the VERB, PREPOSITION, or NOUN fields do not contain data for the selected item, the system will not display default values for those fields during CPRS or Outpatient Pharmacy prescription order entry processing. However, when building the SIG, Outpatient Pharmacy will default to the values the user input during order entry. See Appendix D for a list of Spanish equivalents for some of the more common dosage forms.

```

PACKAGE: Both// <Enter>
Select NOUN: <Enter>
CONJUNCTION: <Enter>

```

Figure 2-3: Example: Dosage Form File Enter/Edit

2.1.3 Enter/Edit Dosages

[PSS EDIT DOSAGES]

The *Enter/Edit Dosages* option allows you to edit Possible Dosages and Local Possible Dosages for a selected Dispense Drug. These dosages may be specified for Inpatient Medication, Outpatient Pharmacy, or both packages.

The BCMA UNITS PER DOSE field is used by Inpatient Medications to populate the Units Per Dose information for Unit Dose orders. This value will determine the number of times a medication must be scanned in order to document a medication administration through Bar Code Medication Administration (BCMA). This field is not required and an entry should be made only when multiple scans through BCMA appear to document erroneous dosages.

The *Enter/Edit Dosages* option allows the user to enter a dosage in a language other than English. PDM does not translate English terms into another language; instead, it allows the user to enter a translation of a term. If a value has not been entered in the OTHER LANGUAGE DOSAGE NAME field, PDM defaults to the value entered in the LOCAL POSSIBLE DOSAGE field. If no values exist in the LOCAL POSSIBLE DOSAGE and OTHER LANGUAGE DOSAGE NAME fields, the system will not display default values for those fields during EHR or Outpatient Pharmacy prescription order entry processing. However, when building the SIG, Outpatient Pharmacy will default to the value the user input during order entry. It is recommended that nothing be entered in the OTHER LANGUAGE DOSAGE NAME field to avoid problems with creating confusing directions on the prescription label.

2.1.4 Most Common Dosages Report

[PSS COMMON DOSAGES]

The *Most Common Dosages Report* displays the most common dosages administered over a specified time period for Unit Dose orders.

Select Dosages Option: M0st Common Dosages Report

This report displays common dosages of Dispense Drugs for Unit Dose orders based on the time frame entered. Unit Dose orders without a Dosage Ordered are not included on this report.

If there are multiple Dispense Drugs associated with an order, only the first Dispense Drug of the order will print with the Dosage Ordered.

Press Return to continue, '^' to exit: <Enter>

Enter start date for gathering Dosages: T-365 (JAN 23, 2000)

Do not print Dosage if frequency is less than: (1-100): 1// 10

Because of the length of this report, and the time needed to gather the information, this report must be queued to a printer.

2.2 Drug Enter/Edit

[PSS DRUG ENTER/EDIT]

The *Drug Enter/Edit* option allows users to make a new Dispense Drug entry into the DRUG file (#50) or to make changes to existing DRUG file (#50) Dispense Drug entries. This option consolidates entries for all Pharmacy packages if the user possesses the proper package key. It will also allow the user to match Dispense Drugs to corresponding National Drug File and Pharmacy Orderable Item entries and to tie the Dispense Drug to a DRUG TEXT file (#51.7) entry. Dispense Drug formulary status is designated via this option and formulary alternatives may be designated for non-formulary Dispense Drug entries.

Dosages created as the result of National Drug File matching or auto creation of dosages may be reviewed and edited via this option.

Outpatient Pharmacy designated Dispense Drug entries may be marked or unmarked as a LAB MONITOR or CLOZAPINE DRUG. This will allow lab values to print on the Outpatient Action Profile for the designated drug and display the most recent lab value and date for the drug during new prescription and refill prescription entry by the pharmacist. Indian Health sites should NEVER mark a drug as a CLOZAPINE DRUG. This use is for VA facilities only, who are registered to submit Clozapine lab data on-line to a national location.

The *Drug Enter/Edit* option allows the user to enter a dosage in a language other than English. PDM does not translate English terms into another language; and it is recommended that nothing be entered in these fields to avoid printing out confusing prescription labels. If a value has not been entered in the OTHER LANGUAGE DOSAGE NAME field, PDM defaults to the value entered in the LOCAL POSSIBLE DOSAGE field. If no values exist in the LOCAL POSSIBLE DOSAGE and OTHER LANGUAGE DOSAGE NAME fields, the system will not display default values for those fields during EHR or Outpatient Pharmacy prescription order entry processing. However, when building the SIG, Outpatient Pharmacy will default to the value the user input during order entry.

Patch PSS*1*61 adds a new code "F" for NON REFILLABLE to the DEA, SPECIAL HDLG field (#3) of the DRUG file (#50), which will allow sites to mark drugs other than controlled substances as NON REFILLABLE.

When using the *Drug Enter/Edit* option, a warning message is displayed if a discrepancy is found between the CS FEDERAL SCHEDULE field (#19) of the VA PRODUCT file (#50.68) and the DEA, SPECIAL HDLG field (#3) of the DRUG file (#50). The warning message says, "The CS Federal Schedule associated with this drug in the VA Product file represents a DEA, Special Handling code of XX", where XX is the DEA, SPECIAL HDLG code mapped to corresponding CS FEDERAL SCHEDULE code defined as follows (schedule I, IV and V are identical):

	CS FEDERAL SCHEDULE	DEA, SPECIAL HDLG
Schedule I narcotics	1	1
Schedule II narcotics	2	2A
Schedule II non-narcotics	2n	2C
Schedule III narcotics	3	3A
Schedule III non-narcotics	3n	3C
Schedule IV narcotics	4	4
Schedule V narcotics	5	5

2.3 Drug Interaction Management

[PSS DRG INTER MANAGEMENT]

The *Drug Interaction Management* sub-menu provides options through which local drug interactions may be entered or edited in the DRUG INTERACTION file (#56) or the severity of any interaction in the file may be changed from significant to critical.

2.3.1 Enter/Edit Local Drug Interaction

[PSS INTERACTION LOCAL ADD]

The *Enter/Edit Local Drug Interaction* option allows Pharmacy sites to add local drug interactions to the DRUG INTERACTION file (#56) or edit only local drug interactions already in the file. The national entries in the DRUG INTERACTION file (#56) cannot be edited.

When a prescription is filled, this information displays on the screen during the order checking process of medication order entry or prints whenever a prescription is filled.

```
Select Pharmacy Data Management Option: DRUG INTERACTION Management
Select Drug Interaction Management Option: Enter/Edit Local Drug Interaction
Select Drug Interaction: LOCALLY/TEST INTERACTION
ARE YOU ADDING 'LOCALLY/TEST INTERACTION' AS A NEW DRUG INTERACTION? Y (YES)

Figure 2-17: Example: Report of Locally Entered Interactions

2.4 Electrolyte File (IV)

[PSSJI ELECTROLYTE FILE]

The *Electrolyte File* option allows the contents of the DRUG ELECTROLYTES file (#50.4) to be altered. This file contains the names of anions/cations and their concentration units. The file provides the ability for sites to enter IV orders for electrolytes as individual ingredients so that the IV label will print the total of individual electrolytes rather than the additive names. The ELECTROLYTES sub-file in the IV ADDITIVES (#52.6) and IV SOLUTIONS (#52.7) files point to this Electrolyte file.

```
Select Pharmacy Data Management Option: ELectrolyte File (IV)

```

Figure 2-19: Example 2: Electrolyte File (Deleting)

2.5 Lookup into Dispense Drug File

[PSS LOOK]

The *Lookup into Dispense Drug File* option provides a lookup into the DRUG file (#50) and displays fields that are commonly edited. It is not possible to edit entries in the DRUG file (#50) from this option. Edits can be made through the use of the *Drug Enter/Edit* option. Patch PSS*1*61 ensures that the newly populated CS FEDERAL SCHEDULE field (#19) of the VA PRODUCT file (#50.68) is also included as part of the drug details in the *Lookup into Dispense Drug File* [PSS LOOK] option.

2.6 Medication Instruction File Add/Edit

[PSSJU MI]

The *Medication Instruction File Add/Edit* option allows the user to enter and edit abbreviations and expansions in the MEDICATION INSTRUCTION file (#51) and to “flag” those entries for use by the Inpatient Medications package only, Outpatient Pharmacy package only, or both. The expansions in the MEDICATION INSTRUCTION file (#51) expand the Schedule and Patient Instructions when building the SIG. The Inpatient Medications package contains a field called SPECIAL INSTRUCTIONS that utilizes these abbreviations and expansions when printing various reports. Additionally, the Outpatient Pharmacy package utilizes these abbreviations for expansions when building the prescription SIG.

The *Medication Instruction File Add/Edit* option allows the user to enter the expansion in a language other than English. PDM does not translate English terms into another language; instead, it allows the user to enter a translation of a term. If a value has not been entered in the OTHER LANGUAGE EXPANSION field, PDM defaults to the value entered in the EXPANSION field. If no values exist in the EXPANSION and OTHER LANGUAGE EXPANSION fields, an EXPANSION value will not print when Outpatient Pharmacy builds the SIG. It is recommended that the OTHER LANGUAGE EXPANSION field not be used initially to avoid a problem with printing confusing prescription labels.

```
Select Pharmacy Data Management Option: MEDICATION INSTRUCTION File Add/Edit  
  
Select MEDICATION INSTRUCTION NAME: HS      AT BEDTIME  
NAME: HS// <Enter>  
SYNONYM: QHS// <Enter>

PLURAL: <Enter>  
INTENDED USE: IN & OUTPATIENT// <Enter>  
FREQUENCY (IN MINUTES): 1440// <Enter>
```

Figure 2-23: Example: Edit Frequency in Medication Instruction File

2.7 Medication Route File Enter/Edit

[PSS MEDICATION ROUTES EDIT]

The *Medication Route File Enter/Edit* option provides the ability to enter and edit data in the MEDICATION ROUTES file (#51.2). Medication routes may be designated for use in all packages or for use only in the National Drug File package. If an Outpatient Pharmacy expansion has been entered at the “OUTPATIENT EXPANSION” prompt, the Outpatient Pharmacy expansion portion of the medication route will appear as part of the SIG on the prescription label exactly as the Outpatient Pharmacy expansion was entered in MEDICATION ROUTES file (#51.2). The IV FLAG field in the MEDICATION ROUTES file (#51.2) is used to determine that the order can be processed through the IV Package.

The *Medication Route File Enter/Edit* option allows the user to enter an interpretation of the OUTPATIENT EXPANSION field in a language other than English. PDM does not translate English terms into another language; instead, it allows the user to enter a translation of a term. If a value has not been entered in the OTHER LANGUAGE EXPANSION field, PDM will default to the value entered in the OUTPATIENT EXPANSION field. If no values exist in the OUTPATIENT EXPANSION and OTHER LANGUAGE EXPANSION fields, the system will not display default values for those fields during EHR or Outpatient Pharmacy prescription order entry processing. However, when building the SIG, Outpatient Pharmacy will default to the value the user input during order entry. See Appendix G for a list of Spanish equivalents for some of the more common medication routes.

Example 1 demonstrates how to enter a new medication route.

```
Select MEDICATION ROUTES NAME: SUBCUTANEOUS      SC
NAME: SUBCUTANEOUS// <Enter>
ABBREVIATION: SC// <Enter>
PACKAGE USE: ALL PACKAGES// <Enter>
OUTPATIENT EXPANSION: SUBCUTANEOUSLY// <Enter>
OTHER LANGUAGE EXPANSION:
IV FLAG: YES// <Enter>
```

Figure 2-24: Example 1: Enter Medication Route File

Text can be entered to edit the existing entries for a medication route, as demonstrated in Example 2 below. Since no value exists in the OTHER LANGUAGE EXPANSION database and the user did not enter a translation, the OUTPATIENT EXPANSION value will print on the patient's prescription label by default.

```
Select MEDICATION ROUTES NAME: SUBLINGUAL      SL
NAME: SUBLINGUAL// <Enter>
ABBREVIATION: SL// <Enter>
PACKAGE USE: ALL PACKAGES// <Enter>
OUTPATIENT EXPANSION: UNTIL DISSOLVED// UNDER THE TONGUE UNTIL DISSOLVED
OTHER LANGUAGE EXPANSION:<Enter>
IV FLAG:
```

Figure 2-25: Example 2: Medication Route File Edit

If the text to be replaced is more than 29 characters, the "REPLACE" prompt will automatically appear. Replacement text for shorter text entries may be entered after the double slashes. Some files may be set up to refuse deletions, depending on the site's File Manager setup.

```
Select MEDICATION ROUTES NAME: NEW INHALATION MED ROUTE EXAMPLE      NIMRE
NAME: NEW INHALATION MED ROUTE EXAMPLE Replace @
DELETIONS ARE NOT ALLOWED!?? Required
NAME: NEW INHALATION MED ROUTE EXAMPLE Replace ... With <Enter>
Replace <Enter>

DELETIONS ARE NOT ALLOWED!?? Required
NAME: NEW INHALATION MED ROUTE EXAMPLE Replace <Enter>
ABBREVIATION: NIMRE// <Enter>
PACKAGE USE: NATIONAL DRUG FILE ONLY// <Enter>
OUTPATIENT EXPANSION: AS NEEDED// <Enter>
OTHER LANGUAGE EXPANSION: <Enter>
IV FLAG: <Enter>
```

Figure 2-26: Example 3: Medication Route File Deletions Not Allowed

2.8 Orderable Item Management

[PSS ORDERABLE ITEM MANAGEMENT]

The *Orderable Item Management* sub-menu provides an option through which the Pharmacy Orderable Items are maintained.

2.8.1 Edit Orderable Items

[PSS EDIT ORDERABLE ITEMS]

The *Edit Orderable Items* option allows the user to enter and edit data in the PHARMACY ORDERABLE ITEM file (#50.7). If a Pharmacy Orderable Item Drug Text Entry is identified at the “OI-DRUG-TEXT” prompt, it will be viewable during medication order entry processes through EHR, Outpatient Pharmacy, and Inpatient Medications. Pharmacy Orderable Item defaults can be entered for selected fields. These defaults will be displayed to the user during the medication order entry processes for all applications through which medication orders can be entered.

The *Edit Orderable Items* option allows the user to enter patient instructions in a language other than English. PDM does not translate English terms into another language; instead, it allows the user to enter a translation of a term. If a value has not been entered in the OTHER LANGUAGE INSTRUCTIONS field, PDM will default to the value entered in the PATIENT INSTRUCTIONS field. If the PATIENT INSTRUCTIONS field does not contain data for the selected orderable item, the system will not present default patient instructions to the user during CPRS or Outpatient Pharmacy prescription order processing. However, when building the SIG, Outpatient Pharmacy will default to the value the user input through backdoor Outpatient Pharmacy order entry. It is recommended that the OTHER LANGUAGE INSTRUCTIONS field not be used initially to prevent a problem with printing confusing instructions on the prescription label.

```
Select Orderable Item Management Option: EDIT Orderable Items
This option enables you to edit Orderable Item names, Formulary status,
drug text, Inactive Dates, and Synonyms.

Select PHARMACY ORDERABLE ITEM NAME: IBUPROFEN 800MG TAB

Figure 2-27: Example: Editing Pharmacy Orderable Items

2.8.2 Dispense Drug/Orderable Item Maintenance

[PSS MAINTAIN ORDERABLE ITEMS]

The *Dispense Drug/Orderable Item Maintenance* option is used for maintaining the relationship between Dispense Drugs and Pharmacy Orderable Items. Entries made at the Pharmacy Orderable Item prompts will be used by the Outpatient Pharmacy, Inpatient Medications, and EHR packages as defaults during the medication order entry processes. If no entries are made at the “MED ROUTE” and “SCHEDULE TYPE” prompts, the software will assume the defaults of PO (oral) and CONTINUOUS, respectively.

The *Dispense Drug/Orderable Item Maintenance* option allows the user to enter patient instructions in a language other than English. PDM does not translate English terms into another language; instead, it allows the user to enter a translation of a term. If a value has not been entered in the OTHER LANGUAGE INSTRUCTIONS field, PDM will default to the value entered in the PATIENT INSTRUCTIONS field. If the PATIENT INSTRUCTIONS field does not contain data for the selected orderable item, the system will not present default patient instructions to the user during EHR or Outpatient Pharmacy prescription order processing. . However, when building the SIG, Outpatient Pharmacy will default to the value the user input through backdoor Outpatient Pharmacy order entry. It is recommended that the OTHER LANGUAGE INSTRUCTIONS field not be used initially to prevent a problem with printing confusing instructions on the prescription label.

Select Orderable Item Management Option: Dispense Drug/Orderable Item Maintenance

This option enables you to match Dispense Drugs to an entry in the Pharmacy Orderable Item file, or create a new Pharmacy Orderable Item entry for a Dispense Drug.

```

Figure 2-28: Example: Dispense Drug/Orderable Item Maintenance

2.8.3 Orderable Item/Dosages Report

[PSS ORDERABLE ITEM DOSAGES]

The *Orderable Item/Dosages Report* option prints a report that displays Inpatient Medication and Outpatient Pharmacy dosages for each Pharmacy Orderable Item. These are the dosages that will display for selection through CPRS when an Orderable Item is selected through EHR at the time an Orderable Item is selected for a medication order. Due to the length of this report, it must be queued to a printer.

This option prints a report, sorted by Pharmacy Orderable Item, that displays Inpatient Medication and Outpatient Pharmacy dosages for Pharmacy Orderable Items. These dosages will display for selection through EHR when an Orderable Item is selected for a medication order. Along with each dosage that is displayed on the report, the name of the drug entry from the DRUG file (#50) that provided the dosage is displayed.

Not every dosage from the DRUG file (#50) will display on this report. For example, if there are duplicate Possible Dosages for a Pharmacy Orderable Item, and there are different Dispense Units Per Dose, only the Possible Dosage with the lowest Dispense Units Per Dose will display on the report. If there are package specific Possible Dosages and Local Possible Dosages for drugs tied to the Pharmacy Orderable Item, only the Possible Dosages will display on the report because Possible Dosages always override Local Possible Dosages.

In summary, this report will screen out Possible Dosages and Local Possible Dosages when appropriate, so only the dosages selectable through EHR will display on this report. Additionally, the report will display in parenthesis the dosage as it will appear on the Outpatient Pharmacy prescription label, if the dosage is a Possible Dosage.

2.10 Formulary Information Report

[PSS NFI]

The *Formulary Information Report* option provides a listing of pertinent Pharmacy formulary information. The report is organized alphabetically by Dispense Drug but will also display the Pharmacy Orderable Item to which the Dispense Drug is matched. An “N” in a column indicates that the Dispense Drug is marked non-formulary at that level (Local, VISN, or National). If the Dispense Drug is restricted, an “R” appears in the appropriate column.

The Application Package Use indicator is also displayed on the report. If the user selects to include drug text in the report, an “I” will appear in the appropriate column to indicate drugs for which drug text information has been identified in the DRUG file (#50).

```
Select Pharmacy Data Management Option: Formulary Information Report
```

This report shows the dispense drugs and orderable items with the formulary information associated with them.

Select one of the following:

```
A      ALL
S      SELECT A RANGE
```

```
Print Report for (A)ll or (S)elect a Range: S// <Enter> ELECT A RANGE
```

To see drugs beginning with the letter 'A', enter 'A', or whichever letter you wish to see. To see drugs in a range, for example drugs starting with the letters 'G', 'H', 'I' and 'J', enter in the format 'G-J'.

Select a Range: S

You have the choice to print the drug text information.
If you answer "yes" to the question, you will print all the drug text information for both dispense drug and orderable items.
If you answer "no", you will print only formulary designations.

This report requires 132 columns.

You may queue the report to print, if you wish.

Include drug text information ? NO// YES

Report will be for drugs starting with the letter S,
and ending with drugs starting with the letter S.

2.11 Drug Text Enter/Edit

[PSS EDIT TEXT]

The *Drug Text Enter/Edit* option enables you to enter and/or edit entries in the DRUG TEXT file (#51.7). This file contains drug information, restrictions, and guidelines. Some entries are nationally populated by National Drug File. Examples of Drug Text that sites may want to add are pediatric dosing guidelines by weight, statin comparison charts, and facility restrictions on use. The entries from National Drug File are for VA use only. They can't be deleted, but if they aren't associated with specific Dispense Drugs or Pharmacy Orderable Items, they will not display or cause any problems for IHS sites. Drug text can be tied to a Dispense Drug in DRUG file (#50), or it can be tied to a Pharmacy Orderable Item through the PHARMACY ORDERABLE ITEM file (#50.7). Drug text tied to a Pharmacy Orderable Item is viewable when a medication is selected in Outpatient Pharmacy and Inpatient Medications, if it has been tied to the Pharmacy Orderable Item or Dispense Drug. Do not tie drug text to both a Dispense Drug and its associated Pharmacy Orderable Item because this will prevent the Drug Text from being displayed in EHR.

Users must be using Screen Editor in order to be able to enter new Drug Text correctly. If the user is currently using Line Editor, this can be edited by the user through the User's Toolbox, Edit User Characteristics option.

The *Drug Text Enter/Edit* option also enables you to view or print a report which will display the Drug Text Name, Synonyms, Drug Text, Inactive date (if inactive), and to list all drug and Pharmacy orderable items linked to it. See section 1.13, "Drug Text File Report" for more information.

```
Select Pharmacy Data Management Option: DRUG TEXT
  1  Drug Text Enter/Edit

2.13 Pharmacy System Parameters Edit [PSS SYS EDIT]

The *Pharmacy System Parameters Edit* option allows the user to edit the Pharmacy System Parameters used in PDM. These parameters relate to the printing of Patient Medication Information Sheets. The IHS PMI Sheet parameters are handled outside of the Pharmacy System Parameters Edit option so IHS users will not need to type any of the information shown in the following example.

```
Select Pharmacy Data Management Option: Pharmacy System Parameters Edit

PMIS PRINTER:
PMIS LANGUAGE: ?
    This language will be used as the default for the printing of Patient
    Medication Instruction Sheets (PMIS).
    Choose from:
        1      English
        2      Spanish
PMIS LANGUAGE: 1 English

Select Pharmacy Data Management Option:
```

Figure 2-35: Example: Pharmacy System Parameters Edit

2.14 Standard Schedule Edit

[PSS SCHEDULE EDIT]

The *Standard Schedule Edit* option allows the user to enter or edit entries in the ADMINISTRATION SCHEDULE file (#51.1). The set of times associated with the standard dosage administration schedules can be assigned, as can ward-specific administration times. This feature may be used to define the outpatient expansion to be used when the schedule is entered for an Outpatient Pharmacy medication order. Entry of a frequency in minutes allows the software to calculate the interval between dosages for Inpatient Medication orders and BCMA and is used by Outpatient Pharmacy to calculate default quantities.

The *Standard Schedule Edit* option allows the user to enter the outpatient expansion value in a language other than English. PDM does not translate English terms into another language; instead, it allows the user to enter a translation of a term. If a value has not been entered in the OTHER LANGUAGE EXPANSION field, PDM defaults to the value entered in the OUTPATIENT EXPANSION field. If no values exist in the OUTPATIENT EXPANSION and OTHER LANGUAGE EXPANSION fields, the system will not present default values for those fields to the user during CPRS or Outpatient Pharmacy prescription order processing. However, when building the SIG, Outpatient Pharmacy will default to the value the user input through Outpatient Pharmacy backdoor order entry. It is recommended that the OTHER LANGUAGE EXPANSION field not be used initially in order to avoid a problem with printing confusing information on prescription labels.

```
Select Pharmacy Data Management Option: STAndard Schedule Edit
Select ADMINISTRATION SCHEDULE: BID
NAME: BID// <Enter>
OUTPATIENT EXPANSION: TWO TIMES A DAY// <Enter>
OTHER LANGUAGE EXPANSION:
TYPE OF SCHEDULE: CONTINUOUS// <Enter>
STANDARD ADMINISTRATION TIMES: 0900-1700// <Enter>
FREQUENCY (IN MINUTES): 720// <Enter>
Select WARD ADMINISTRATION SCHEDULE: <Enter>
```

Figure 2-36: Example: Standard Schedule Edit

2.15 Synonym Enter/Edit

[PSS SYNONYM EDIT]

The *Synonym Enter/Edit* option allows the user to enter synonym information into the SYNONYM field for a selected Dispense Drug. Synonyms are used to easily identify drugs for the BCMA package and the Drug Accountability package, and to simplify medication order entry.

```
Select DRUG GENERIC NAME: NAP
 1 NAPROXEN 250MG S.T.          MS102      N/F      09-05-00

2.16 Controlled Substances/PKI Reports

[PSS CS/PKI REPORTS]

A post-installation routine for patch PSS*1*61 identifies those drugs with discrepancies between the CS FEDERAL SCHEDULE field (#19) of the VA PRODUCT file (#50.68) and DEA, SPECIAL HDLG field (#3) of the DRUG file (#50), and generates four mail messages with the following subjects to the installer and to holders of the PSNMGR keys:

CS FEDERAL SCHEDULE AND DEA SPECIAL HDLG DISCREPANCIES
CONTROLLED SUBSTANCES NOT MATCHED
CONTROLLED SUBSTANCES NOT SET CORRECTLY
DISCREPANCY IN DEA WITHIN DRUGS TIED TO AN OI

These mail messages can be used to clean up the DEA, SPECIAL HDLG code in the DRUG file (#50) where appropriate.

The post-install also checks to see if the DEA, SPECIAL HDLG field (#3) of the DRUG file (#50) is null and if the drug is matched to an entry in the VA PRODUCT file (#50.68), and the CS FEDERAL SCHEDULE field (#19) of the VA PRODUCT file (#50.68) has data, then it updates the DEA, SPECIAL HDLG field (#3) of the DRUG file (#50) with the DEA, SPECIAL HDLG code mapped to corresponding CS FEDERAL SCHEDULE code.

This new *Controlled Substances/PKI Reports* [PSS CS/PKI REPORTS] menu is added to the *Pharmacy Data Management* [PSS MGR] menu to re-generate these post-install Mailman messages on demand.

3.0 Understanding Dosages

Dosages are compiled by collecting information that was previously entered in various files and gathering that information to populate individual fields within the DRUG file (#50). Two types of dosages, Possible Dosages and Local Possible Dosages, are now stored in the DRUG file (#50). Explanations of what determines a Possible Dosage and a Local Possible Dosage are included below, along with diagrams to aid the user in understanding which files and fields contribute to constructing Possible Dosages and Local Possible Dosages. More detailed information on Possible Dosages and Local Possible Dosages is contained in the Pharmacy Ordering Enhancements Pharmacy Data Management Pre-Release Implementation Guide, located on the **IHS EHR website at <http://www.ihs.gov/CIO/EHR/index.cfm?module=preparing under Pharmacy Information, Pharmacy Data Management Implementation Guide>.**

3.1 Possible Dosages

The PROPRANOLOL TAB example in Diagram A is an example of a drug that can have Possible Dosages. Possible Dosages can be broken down into four individual fields; DISPENSE UNITS PER DOSE, DOSE, PACKAGE, and BCMA DISPENSE UNITS PER DOSE. For a drug to have Possible Dosages it must meet the following criteria.

1. The drug must be matched to a VA PRODUCT file (#50.68) entry in National Drug File.
2. The match in National Drug File must be an active single-ingredient product.
3. The strength of the product must be numeric.
4. The Dosage Form/Unit Combination of the product must be marked as convertible in the DOSAGE FORM file (#50.606). See the table below for a list of Dosage Form/Unit Combinations that will automatically be identified by the software.

The Dosage Form/Unit Combinations that have been designated as convertible for the creation of Possible Dosages are displayed in Appendix A: Convertible Dosage Form/Unit Combinations

Possible Dosages are initially populated automatically through the use of the *Auto Create Dosages* option. This option identifies drugs that meet the four criteria mentioned earlier, and by utilizing fields in the VA PRODUCT file (#50.68) and the DOSAGE FORM file (#50.606), it will populate the DRUG file (#50) entry with Possible Dosage information.

Figure 3-1 is an example of how the PROPRANOLOL HCL 20MG TAB drug entry would exist under the current file setup

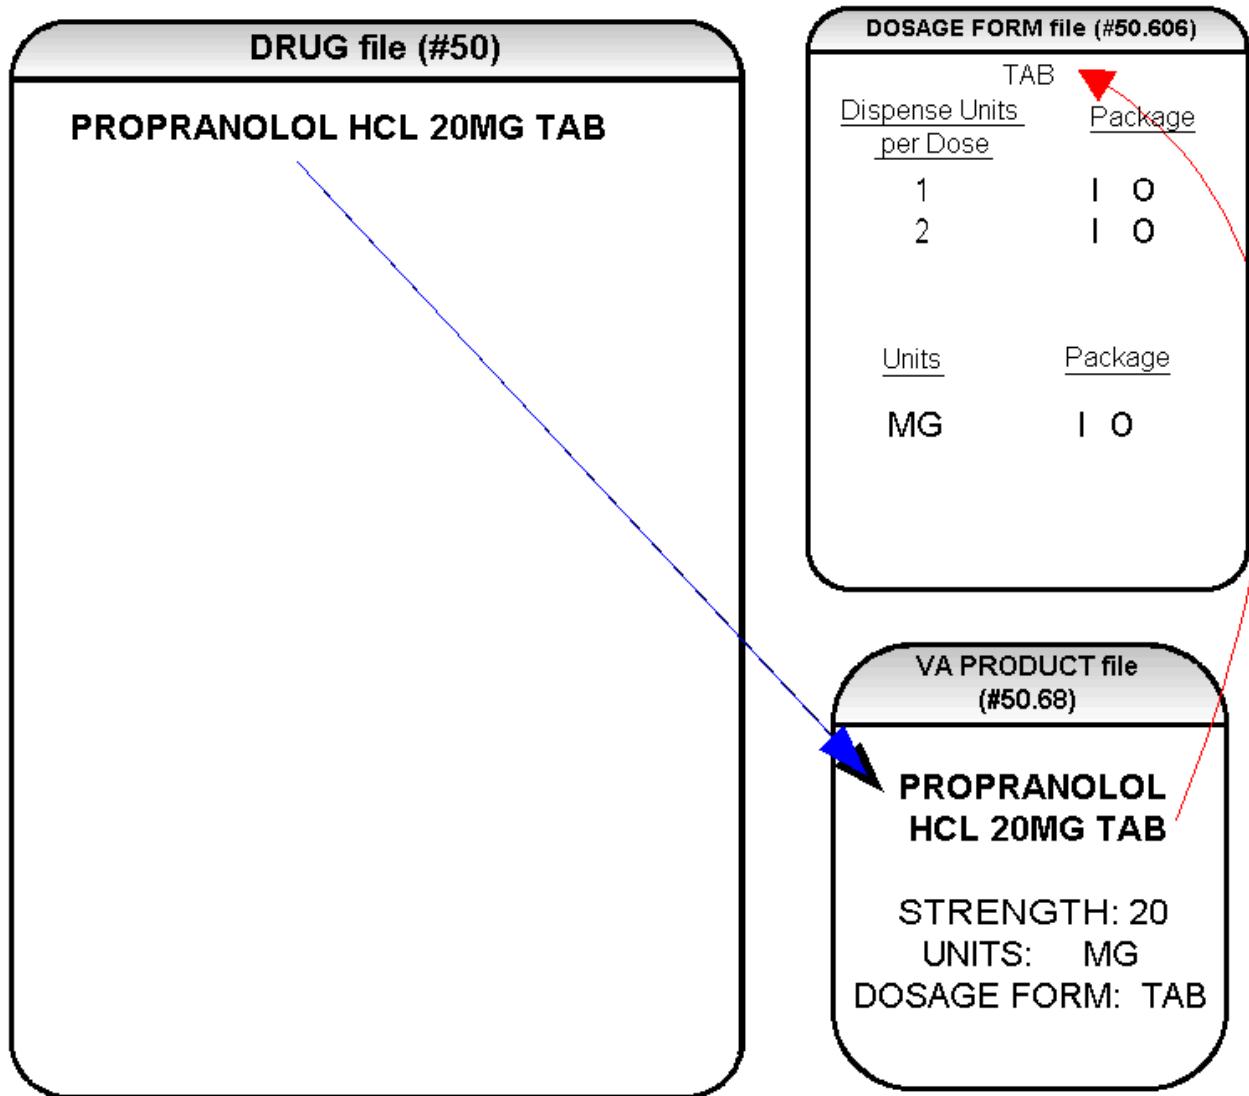

Figure 3-1: Example of the PROPRANOLOL HCL 20MG tab

The VA Product match for this drug is PROPRANOLOL HCL 20MG TAB. It is a single ingredient product with a numeric Strength (20). It has a Dosage Form of TAB and units of MG in the VA PRODUCT file (#50.68). Additionally, the non-editable multiple field called UNITS from the DOSAGE FORM file (#50.606) indicates which combination of Dosage Form and Units can be converted to Possible Dosages, assuming that the product is a single ingredient drug with a numeric strength. It also indicates the package (Inpatient Medications, Outpatient Pharmacy, or both) for which Possible Dosages can be created. So, in the first PROPRANOLOL example, the Dosage Form/Unit Combination of TAB/MG is convertible for both Inpatient Medications and Outpatient Pharmacy. The DISPENSE UNITS PER DOSE multiple of the DOSAGE FORM file (#50.606) is a non-editable field used to calculate dosages during the dosage creation process. 1, or 1 and 2, were chosen for all Dosage Forms because they require the least amount of editing in the DRUG file (#50). (See Figure 3-2)

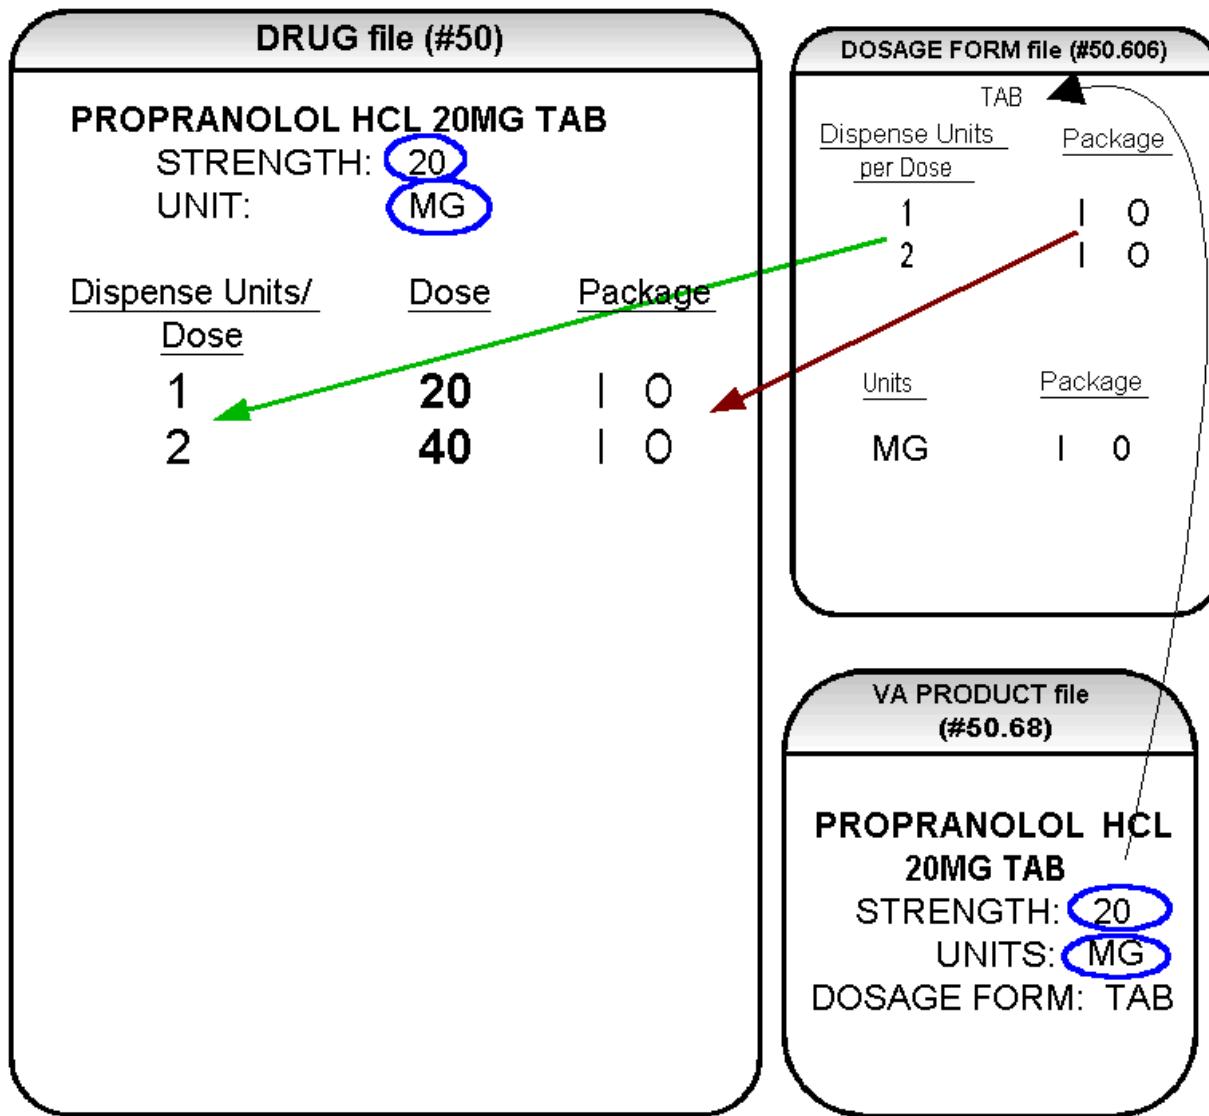

Figure 3-2: Drug entry with new data

Figure 3-2 shows the drug entry with the new data. Two new fields, STRENGTH and UNIT, have been added to the DRUG file (#50). These two fields are populated with data based on the data contained in the STRENGTH and UNITS fields of the VA PRODUCT file (#50.68) match. The DOSE field of the POSSIBLE DOSAGE sub-file of the DRUG file (#50) is populated by multiplying the entry in the DISPENSE UNITS PER DOSE field of the POSSIBLE DOSAGE sub-file of DRUG file (#50) by the numeric value of the STRENGTH field in the DRUG file (#50).
(DOSE=DISPENSE UNITS PER DOSE x STRENGTH)

Figure 3-3 shows what the *Auto Create Dosages* option could create as dosage selections for a PROPRANOLOL TAB Orderable Item when one or more drugs are matched to that Orderable Item. (See Figure 3-3)

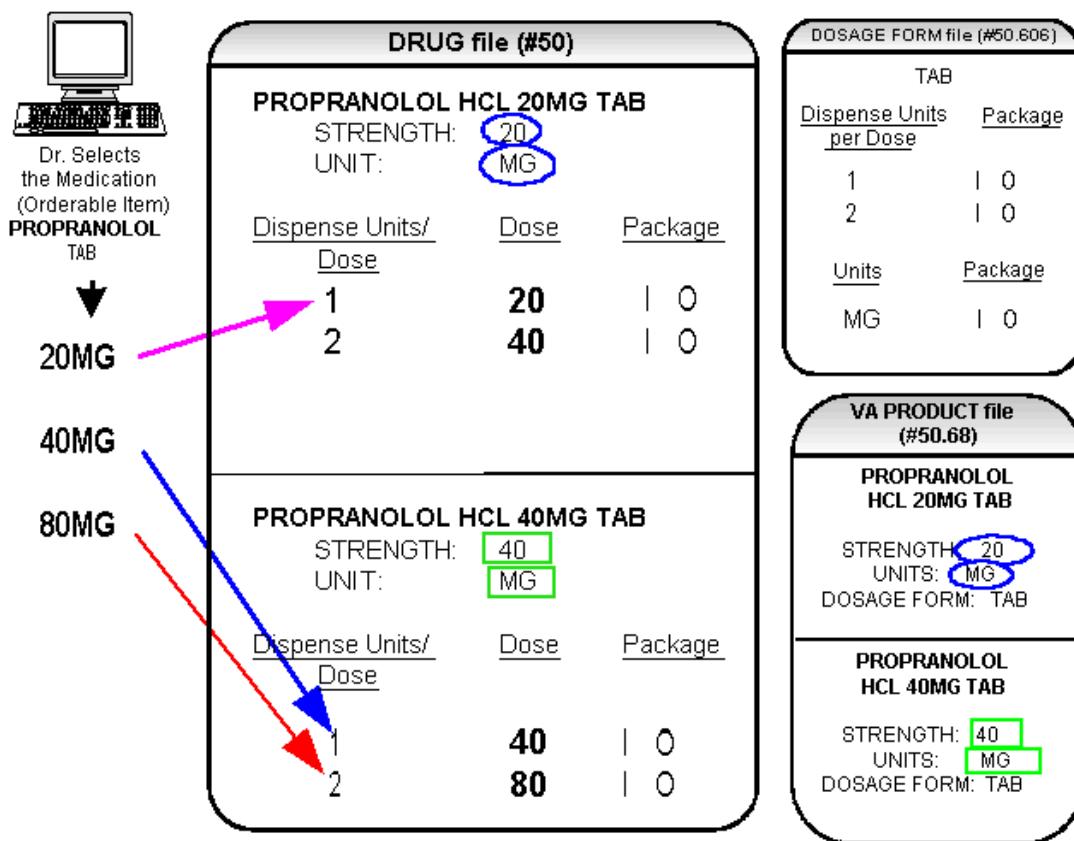

Figure 3-3: Auto Create Dosages option

In Figure 3-3, the PROPRANOLOL drug entries are matched to VA Products that have numeric strengths, 20 and 40, and the VA Products both have the Dosage Form/Unit Combination of TAB/MG. Since TAB/MG is marked as “convertible” in the DOSAGE FORM file (#50.606) for both Inpatient Medication and Outpatient Pharmacy, the new STRENGTH and UNIT fields in the DRUG file (#50) for these drugs can be populated by the software. The STRENGTH and UNITS fields of DRUG file (#50) are populated from the VA PRODUCT file (#50.68) into the DRUG file (#50).

The new fields in the DRUG file (#50), DISPENSE UNITS PER DOSE, DOSE, and PACKAGE, are now populated with data. The Dispense Units Per Dose of “1” and “2” came from the new DISPENSE UNITS PER DOSE field in the DOSAGE FORM file (#50.606). When this data is carried over to the DRUG file (#50), the dose is computed by multiplying the Dispense Units Per Dose from DRUG file (#50) by the Strength from DRUG file (#50) of each drug. The PACKAGE field values of the DOSAGE FORM file (#50.606), “T” for Inpatient Medications and “O” for Outpatient Pharmacy, are also copied to the PACKAGE field of DRUG file (#50). Some of the Possible Dosages will be converted for both packages, such as the combination of TAB/MG, since this type of dosage can be ordered for Inpatient Medications and also can be converted to a patient readable Outpatient Pharmacy SIG. Other Dosage

Form/Unit Combinations, such as SYRUP/MG/5ML, can only be converted for Inpatient Medications since they cannot be easily changed to an Outpatient Pharmacy readable SIG.

In this example, PROPRANOLOL TAB is selected as the Orderable Item in CPRS, therefore the dose selection would be:

20MG
40MG
80MG

Notice that there is only one 40MG selection for the provider, yet both the PROPRANOLOL HCL 20MG TAB drug and the PROPRANOLOL HCL 40MG TAB drug entries have doses of 40MG. In this case, the 40MG dose is associated with the PROPRANOLOL HCL 40MG TAB drug, because it has a lower Dispense Units Per Dose (1), than the Dispense Units Per Dose (2) associated with the 40MG dose for the PROPRANOLOL HCL 20MG TAB.

Note: For Possible Dosages, when the software encounters two doses that are the same, the lowest Dispense Units Per Dose will be used to determine the Dispense Drug.

Additionally, another screen that is used for duplicate doses is the non-formulary screen.

Note: If there are two of the same doses, and one is formulary and the other is non-formulary, the formulary entry is the one that is used, regardless of which dose has the lower Dispense Units Per Dose value.

The non-formulary drug filter is executed prior to the lowest Dispense Units Per Dose filter. So in this example, if the PROPRANOLOL HCL 40MG TAB is marked as non-formulary, and the PROPRANOLOL HCL 20MG TAB is formulary, the 40MG dosage selection would be associated with the PROPRANOLOL HCL 20MG TAB, even though it has a higher Dispense Units Per Dose (2) than the 40MG entry for PROPRANOLOL HCL 40MG TAB (1 Dispense Units Per Dose).

Once the Possible Dosages have been created by the *Auto Create Dosages* option, doses can be deleted or added by editing the DISPENSE UNITS PER DOSE field using the *Enter/Edit Dosages* option. The DOSE field is automatically calculated by multiplying the DISPENSE UNITS PER DOSE field times the STRENGTH field. For example, if the PROPRANOLOL TABLET is commonly given in a 10MG dose, and there is not a Dispense Drug entry in DRUG file (#50) of PROPRANOLOL HCL 10MG TAB, a Dispense Units Per Dose of .5 can be added for the PROPRANOLOL HCL 20MG TAB, and a dose of 10MG will be created. If a dose of 60MG is sometimes given for PROPRANOLOL TAB, entering a Dispense Units Per Dose of 3

for the PROPRANOLOL HCL 20MG TAB drug will provide a 60MG dose. Similarly, if the 80MG dose is rarely given, the Dispense Units Per Dose of 2 can be deleted for the PROPRANOLOL HCL 40MG TAB drug, and the 80MG dose will be deleted.

The PACKAGE field can also be edited, but this is a “controlled” type of edit. If the Dosage Form/Unit Combination is not marked as convertible in the DOSAGE FORM file (#50.606) for the package, then that package cannot be added as a package for that Possible Dosage. Strength can also be edited in the DRUG file (#50). If the strength is edited, then all of the doses are automatically re-calculated based on the DISPENSE UNITS PER DOSE and new STRENGTH entry. It is recommended that the strength only be edited in the rare case that the Dispense Drug must be matched to a VA Product with an inappropriate strength. (This scenario is discussed in further detail later in this document.) In summary, by adding new DISPENSE UNITS PER DOSE of .5 and 3 to the PROPRANOLOL HCL 20MG TAB entry, and by deleting the DISPENSE UNITS PER DOSE of 2 for the PROPRANOLOL HCL 40MG TAB entry, the following Possible Dosages now exist for PROPRANOLOL TAB Orderable Item. (See Figure 3-4)

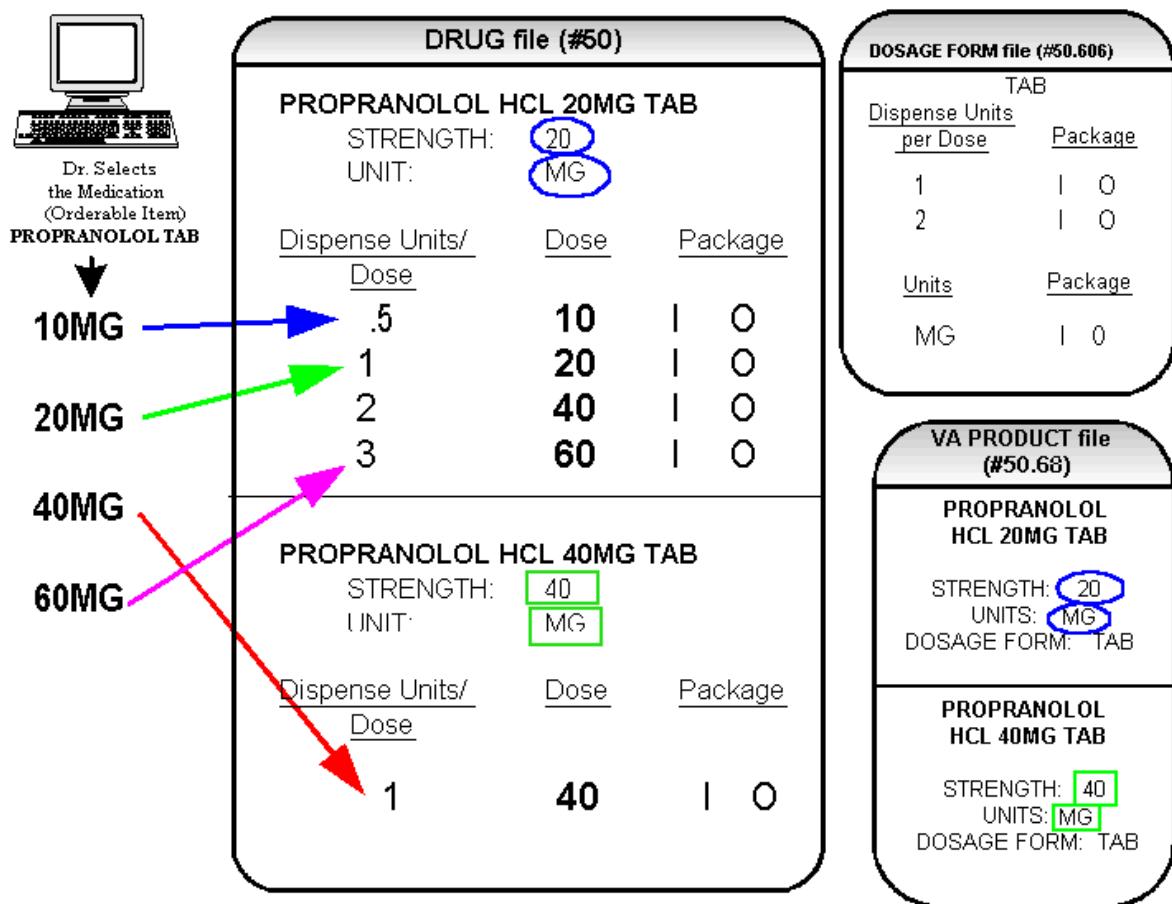

Figure 3-4: PROPRANOLOL TAB Orderable Item

Though the list of dosages is all that the provider will see for selection, each of the dosages is associated with a Dispense Drug. For example, if the 60MG is selected, the Dispense Units Per Dose is 3, and the drug is PROPRANOLOL HCL 20MG TAB. For Outpatient Pharmacy orders the SIG will be built in the same manner as it is today. If the 60MG is chosen, the SIG will begin with “TAKE 3 TABLETS...” and the assigned Dispense Drug is PROPRANOLOL HCL 20MG TAB.

As demonstrated in the PROPRANOLOL example, the key to populating the Possible Dosages in the DRUG file (#50) is the information that is contained in the VA PRODUCT file (#50.68) entry to which that drug is matched. Earlier diagrams also show that dosages can be added, deleted, etc., for a drug by editing the DISPENSE UNITS PER DOSE field for that drug.

In addition to creating Possible Dosages for a drug by editing the DISPENSE UNITS PER DOSE field, appropriate Possible Dosages can be created by editing the STRENGTH field for a drug. When Possible Dosages are created for a drug, the strength information from the VA Product match is moved to the drug entry and stored in the STRENGTH field. The only time this data would not be accurate would be if a VA PRODUCT file (#50.68) entry with the correct strength did not exist, and a different strength of the drug had to be selected for the drug’s VA Product match; however, these instances should be rare. If the desired strength does not exist for a particular drug, the functionality exists to edit the STRENGTH field in the DRUG file (#50) for that drug. Once the strength edit is completed, new Possible Dosages are created for every Dispense Units Per Dose for that drug.

For example, Figure 3-5 shows an entry in the DRUG file (#50) of METOPROLOL TARTRATE 25MG TAB. No entries with a strength of 25 exist in the VA PRODUCT file (#50.68) for that drug, so it is matched instead to a VA Product entry with a strength of 50. (See Figure 3-5)

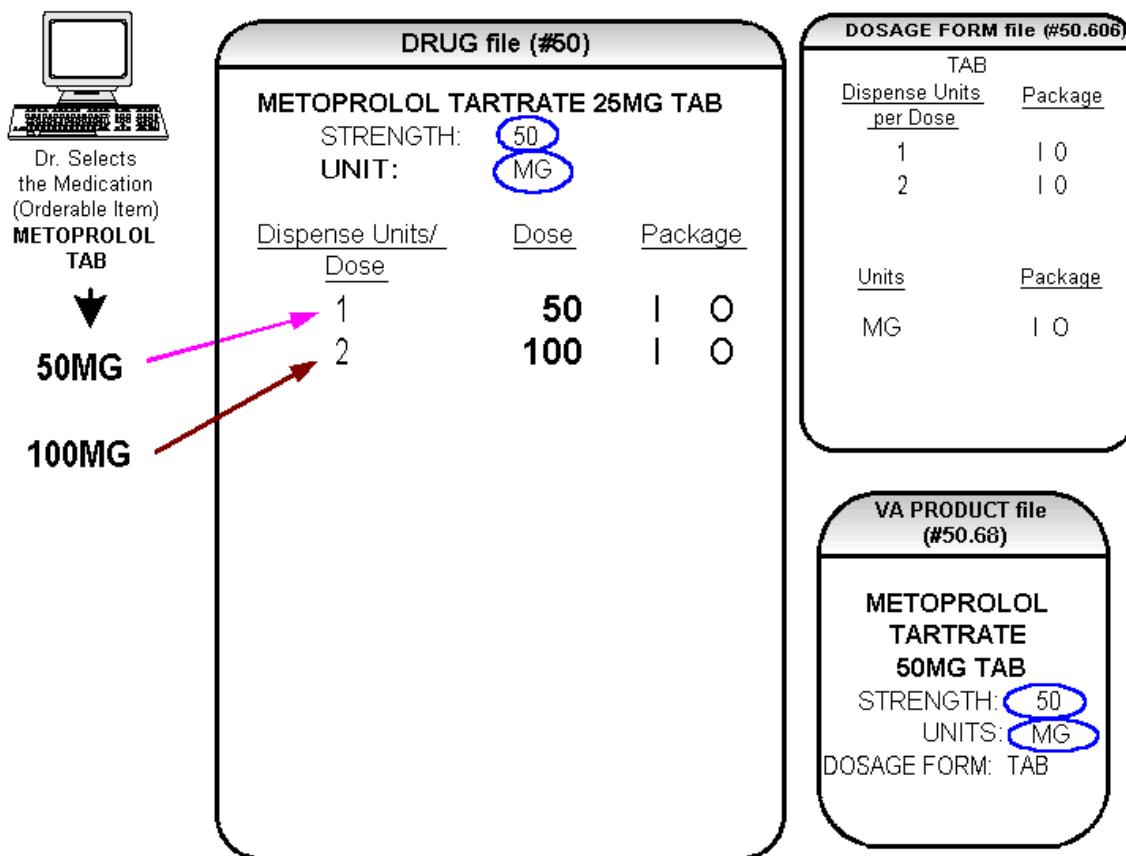

Figure 3-5: Possible Dosages created are 50 MG (1 tablet) and 100MG

In Diagram E, the Possible Dosages created are 50 MG (1 tablet) and 100MG (2 tablets), but the drug is actually METOPROLOL TARTRATE 25MG TAB. These Possible Dosages were created because the strength of the VA PRODUCT file (#50.68) entry is 50. As displayed in Diagram F, the strength in the DRUG file (#50) can simply be edited from 50 to 25, and when that strength is edited, the Possible Dosages for all Dispense Units Per Dose, in this case 1 and 2, will be recalculated. (See Figure 3-6), the Possible Dosages created are 50 MG (1 tablet) and 100MG (2 tablets), but the drug is actually METOPROLOL TARTRATE 25MG TAB. These Possible Dosages were created because the strength of the VA PRODUCT file (#50.68) entry is 50. As displayed in Diagram F, the strength in the DRUG file (#50) can simply be edited from 50 to 25, and when that strength is edited, the Possible Dosages for all Dispense Units Per Dose, in this case 1 and 2, will be recalculated. (See Figure 3-6)

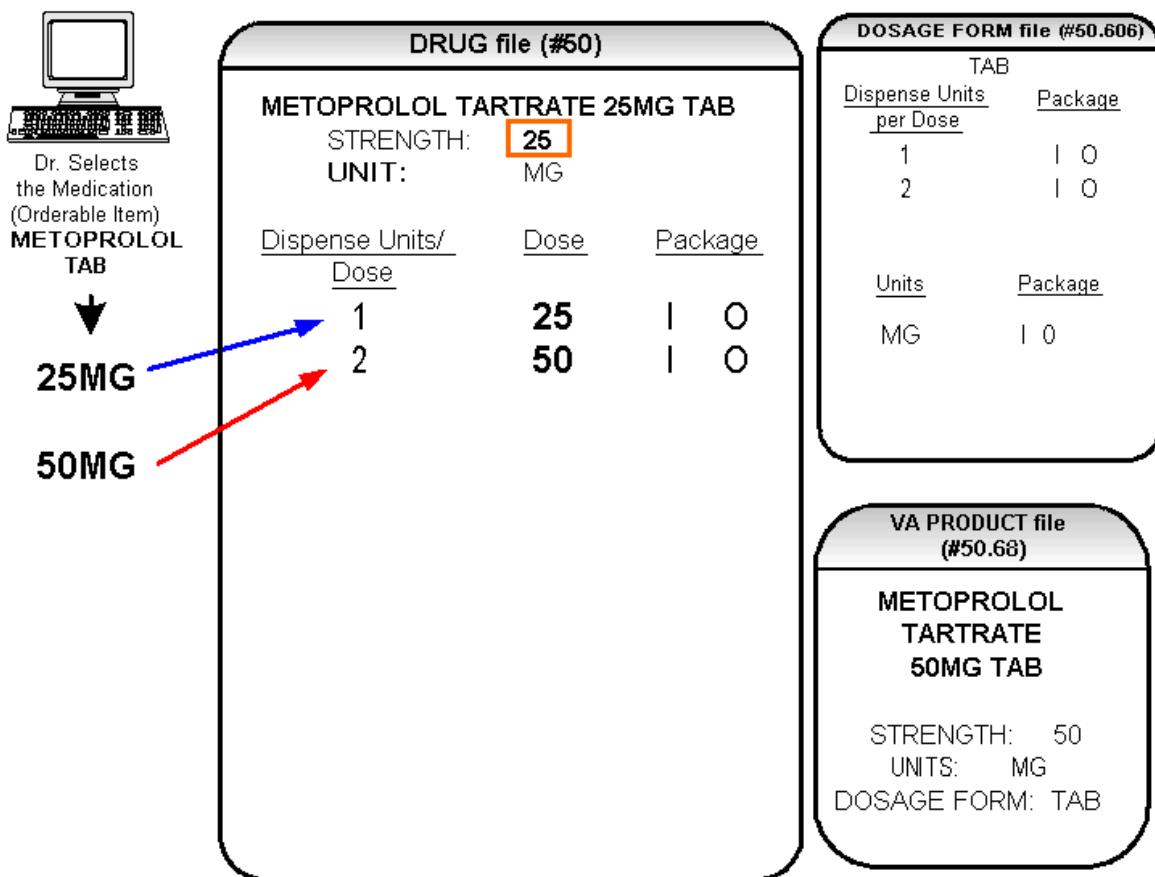

Figure 3-6: Possible Dosages for all Dispense Units Per Dose

3.2 Local Possible Dosages

In an earlier example using PROPRANOLOL TAB, Inpatient Medication and Outpatient Pharmacy Possible Dosages could be created for the Dispense Drugs matched to PROPRANOLOL TAB because they met all of the following four criteria.

1. The drug must be matched to a VA PRODUCT file (#50.68) entry in National Drug File.
2. The match in National Drug File must be an active single-ingredient product.
3. The strength of the product must be numeric.
4. The Dosage Form/Unit Combination of the product must be marked as convertible in the DOSAGE FORM file (#50.606).

In the following example, the Orderable Item requested is TIMOLOL SOLN, OPH, which has two Dispense Drugs matched to it. Neither of these Dispense Drugs meets the four criteria for creating Possible Dosages. The two Dispense Drugs are matched to entries in the VA PRODUCT file (#50.68) as follows. (See Figure 3-7)

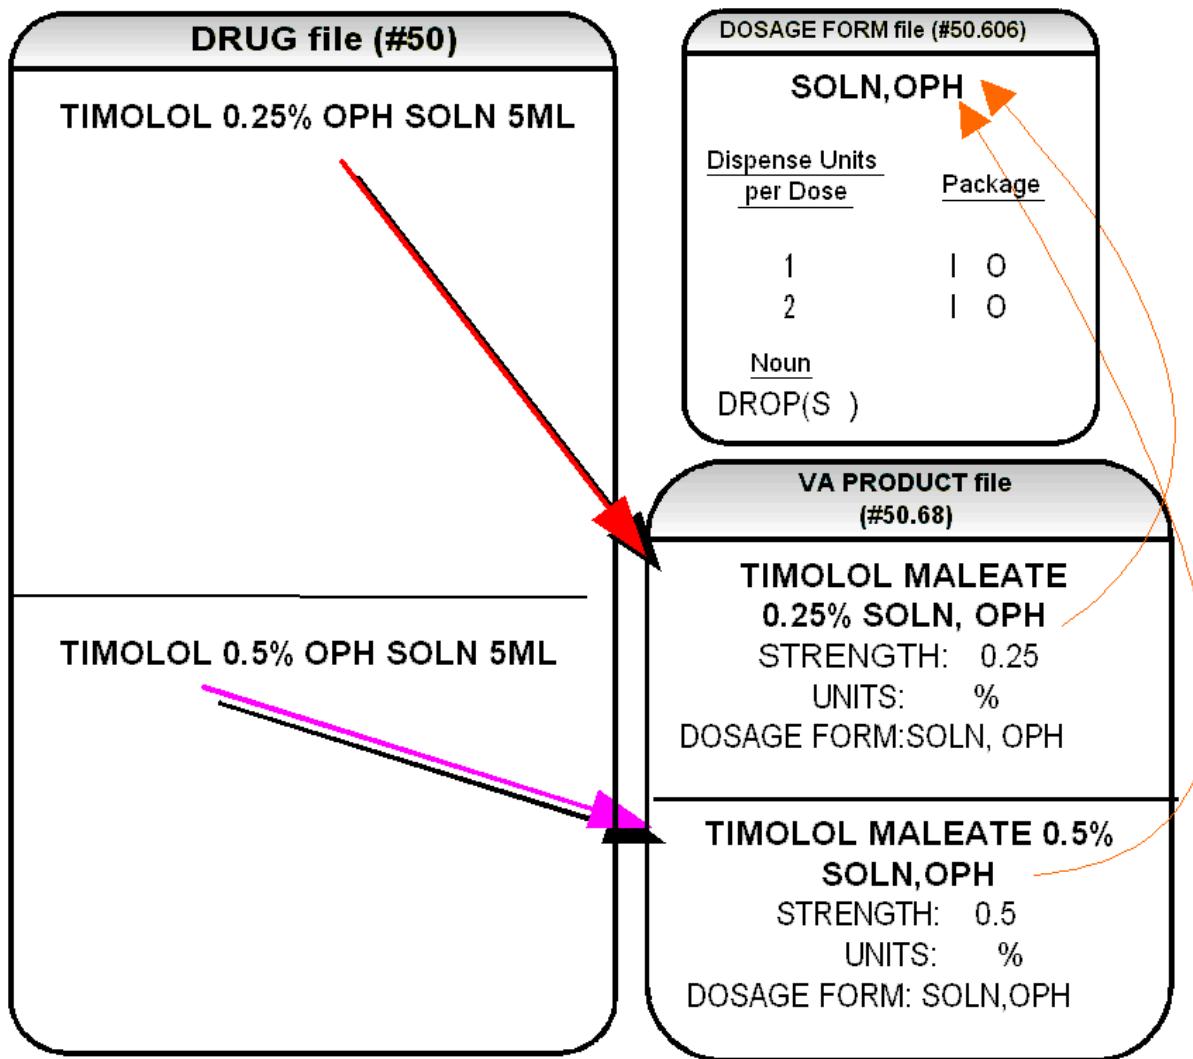

Figure 3-7: The two Dispense Drugs are matched to entries in the VA PRODUCT file (#50.68)

These two drugs meet the first three of the Possible Dosages criteria, but do not meet criteria number four. The Dosage Form/Unit Combination of SOLN,OPH / % is not marked as convertible in the DOSAGE FORM file (#50.606) for Inpatient Medications or for Outpatient Pharmacy. Since Possible Dosages cannot be created for these drugs, Local Possible Dosages must be created. To create Local Possible Dosages the Noun field in the DOSAGE FORM file (#50.606) is utilized. By default, all Local Possible Dosages will be marked for Inpatient Medications and/or Outpatient Pharmacy use based on the package identification of the Noun.

The NOUN field already exists in the DOSAGE FORM file (#50.606). It is a multiple field, meaning that more than one Noun can be associated with each Dosage Form. Some Dosage Forms may have multiple Nouns, while other Dosage Forms may have only one Noun. For example, the Dosage Form CREAM could have the following entries in the NOUN field.

LIBERALLY
SMALL AMOUNT
SPARINGLY
THIN FILM

Alternately, the Dosage Form of TAB would most likely only have one NOUN, TABLET(S).

TABLET(S)

In the TIMOLOL example, a review of the Dosage Form entry for SOLN,OPH, shows that the Dispense Units Per Dose of 1 and 2 are designated, and a Noun of DROP(S) is specified. If the *Auto Create Dosages* option is rerun with the current setup, no Possible Dosages for the two TIMOLOL drugs will be created because the drugs do not meet all four Possible Dosages criteria. Local Possible Dosages will be created of 1 DROP and 2 DROPS.

If a NOUN ends in “(S)” or “(s)”, such as TABLET(S) or capsule(s), the “(S)” or “(s)” will be completely dropped from the Noun when building the SIGs, as long as the Dispense Units Per Dose is 1 or less. If the Dispense Units Per Dose is greater than 1, the parenthesis around the “(S)” will be eliminated, creating a plural Noun, such as TABLETS. For this to happen, the Noun must precisely end in the three characters “(S)”.

Keep in mind that if an Orderable Item is selected in EHR, and there are Possible Dosages for any of the Dispense Drugs tied to that Orderable Item, only the Possible Dosages will be returned and any Local Possible Dosages will be ignored. Local Possible Dosages will only be used when no Possible Dosages can be found for drugs tied to the selected Orderable Item and identified for use by the selected application (Inpatient Medications or Outpatient Pharmacy).

In the TIMOLOL example, the Noun of DROP(S) and the Dosage Form of SOLN,OPH produces the following results. (See Figure 3-8) Sites may wish to create separate Pharmacy Orderable Items for drugs that are available in different % strengths such as Timolol.

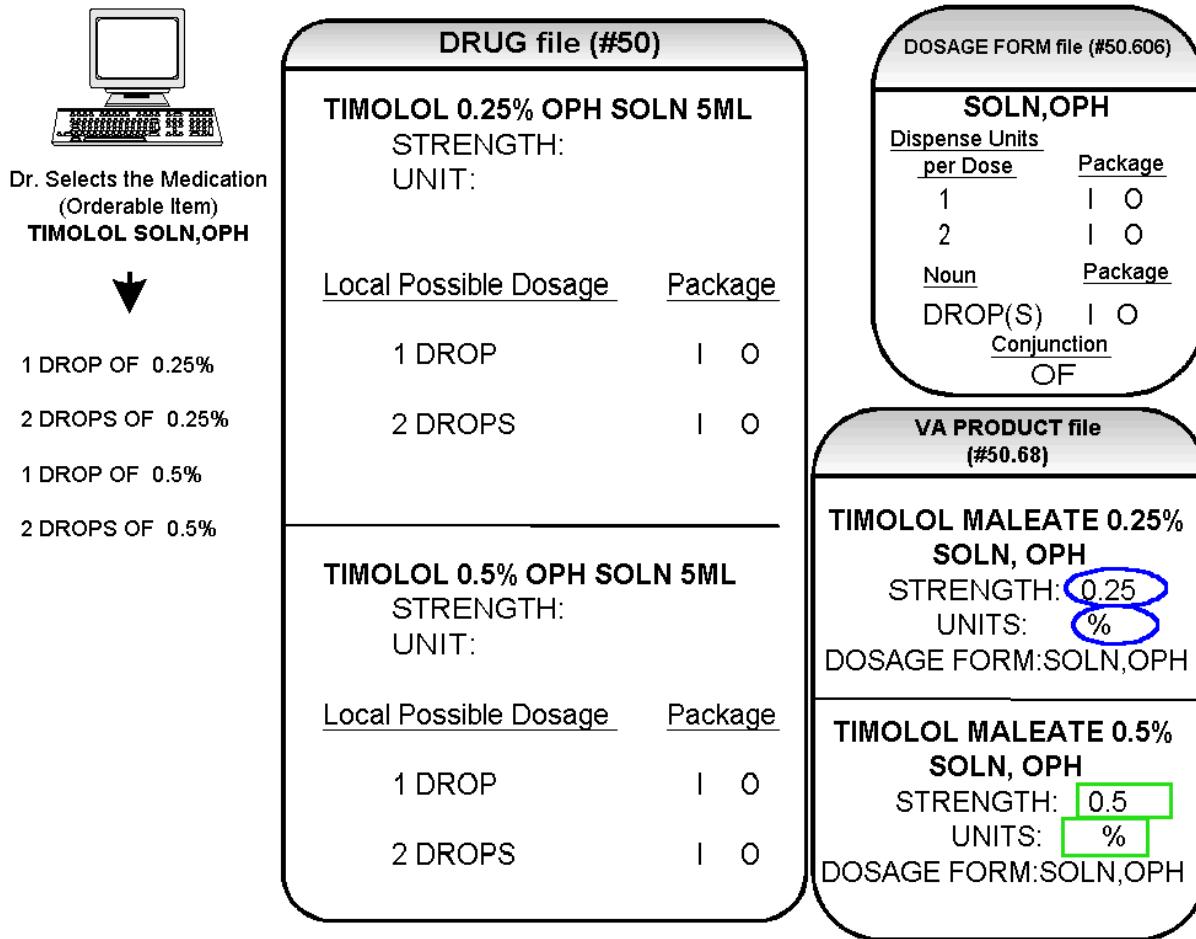

Figure 3-8: The Noun of DROP(S) and the Dosage Form of SOLN,OPH produces these results

3.3 Possible Dosages and Local Possible Dosages

The following dosage example is of a Dispense Drug that has Possible Dosages for Inpatient Medications and Local Possible Dosages for Outpatient Pharmacy. The Dispense Drug is PROMETHAZINE HCL 25MG/5ML SYRUP.

The reason Possible Dosages were created only for Inpatient Medications is because the units of MG/5ML for the SYRUP Dosage Form was only marked convertible for Inpatient Medications.

Note: Local Possible Dosages will only be used to display in the dosage list when no Possible Dosages can be found for drugs tied to the selected Orderable Item and identified for use by the selected application (Inpatient Medication or Outpatient Pharmacy).

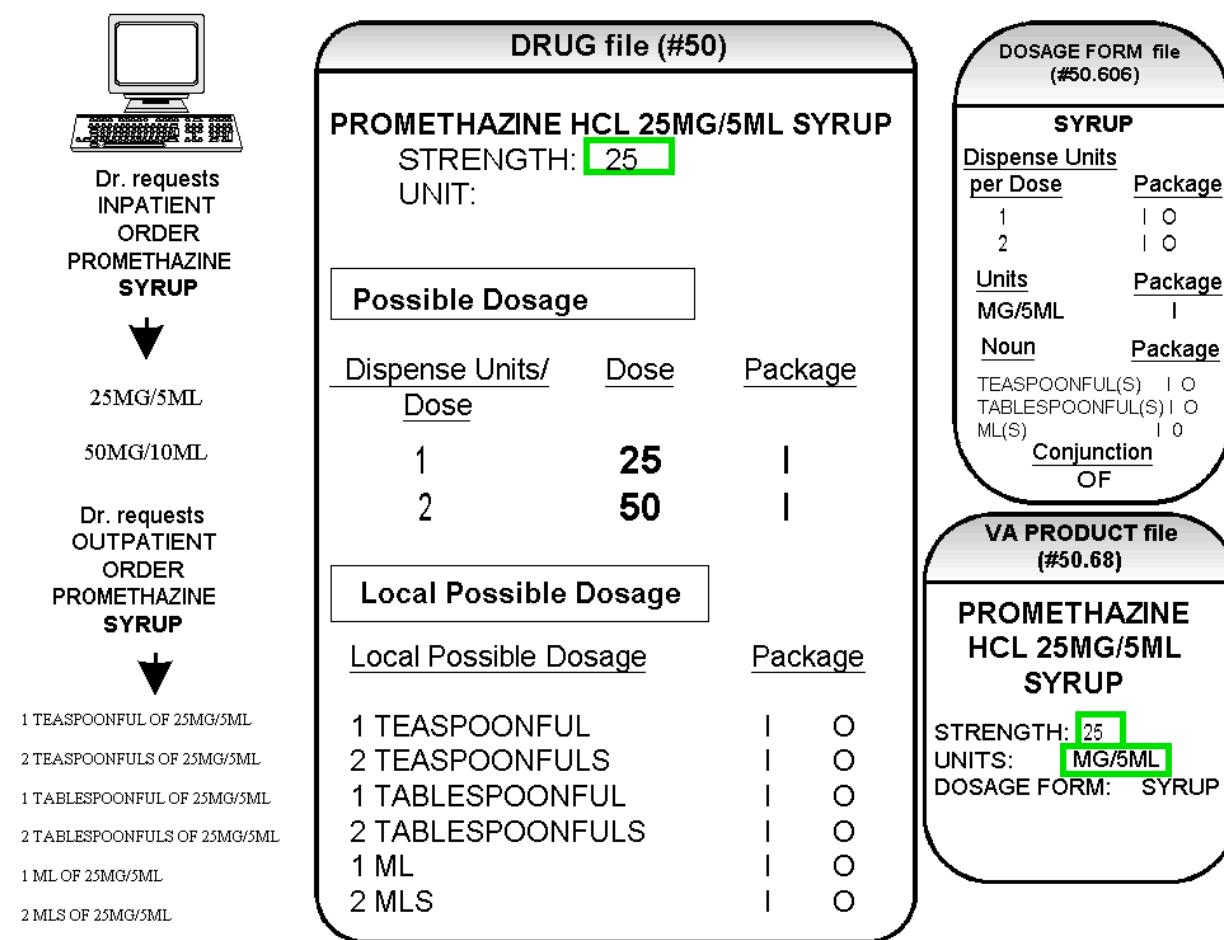

Figure 3-9: Possible Dosages for PROMETHAZINE HCL 25MG/5ML SYRUP

Figure 3-9 illustrates the Possible Dosages and Local Possible Dosages that would be created for PROMETHAZINE HCL 25MG/5ML SYRUP. On the following page, Diagram J illustrates an edit of the STRENGTH field in DRUG file (#50) for a product such as PROMETHAZINE which has volume related UNITS. In the background, the software will evaluate the UNIT field in the DRUG file (#50) to determine if an adjustment in the UNIT is necessary. The software will search for the existence of a “/” in the UNIT field. If the UNIT field contains a “/”, when the strength is edited, calculations will be performed to make appropriate adjustments in the value of the UNIT. For example, the DRUG file (#50) entry may have a STRENGTH of 25 and a UNIT of MG/5ML. If the STRENGTH is edited to 12.5, the UNIT will be adjusted by the software to MG/2.5ML.

When the UNIT value is adjusted, it will not display in the DRUG file (#50); however, throughout all Pharmacy and CPRS displays, the correct, adjusted unit value of the dosage will be displayed. (See Figure 3-10)

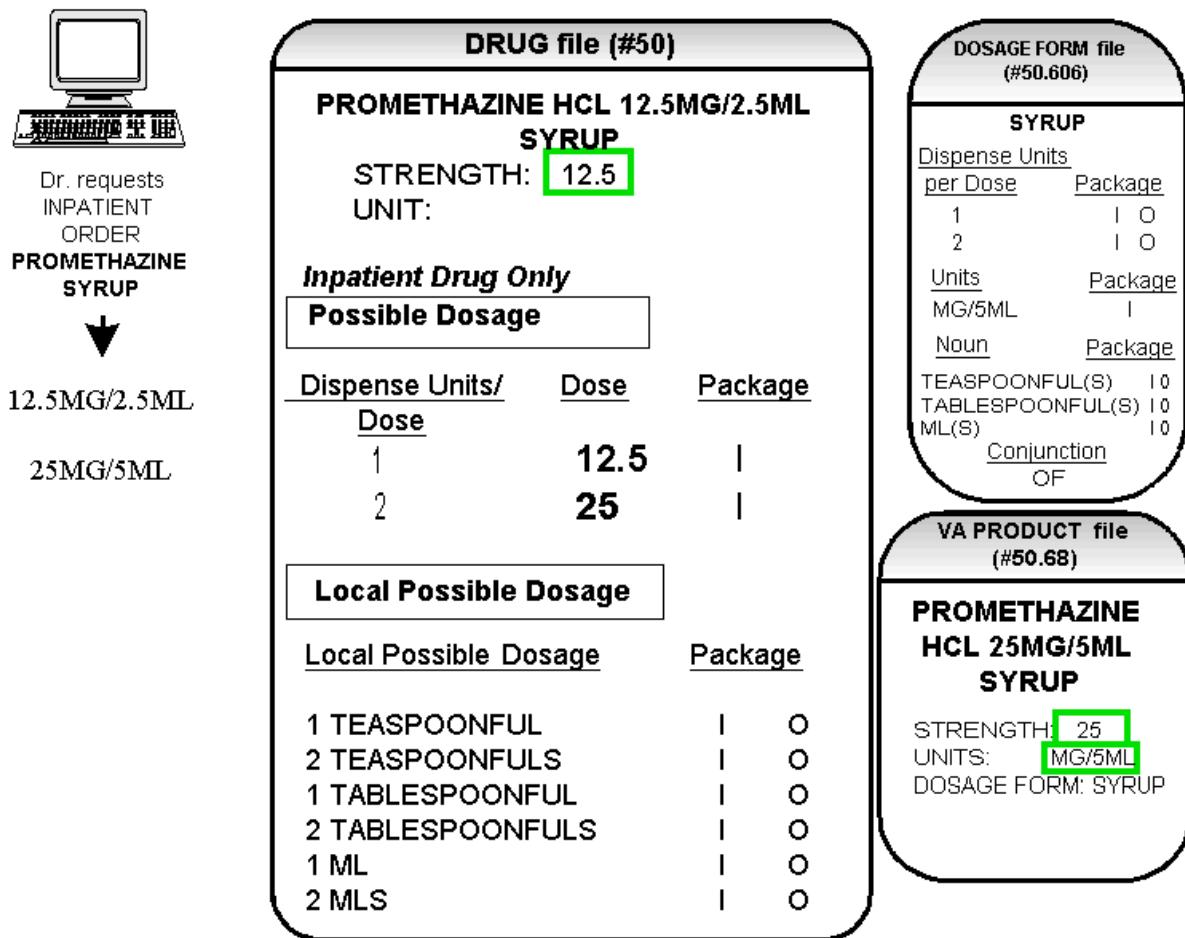

Figure 3-10: Adjusted unit value of the dosage

3.4 Multi-Ingredient Drugs

The following are examples of multi-ingredient drugs. Since multi-ingredient drugs do not meet the criteria for creation of a Possible Dosage, Local Possible Dosages will be created based on the Noun entries in the DOSAGE FORM file (#50.606).

The first example is GUAIFENESIN SYRUP WITH CODEINE 4oz. The Dosage Form of SYRUP has three Nouns, all marked for Inpatient Medications and Outpatient Pharmacy use. These Nouns are TABLESPOONFUL(S), TEASPOONFUL(S), and ML(S). The APPLICATION PACKAGE USE field of the Dispense Drug is marked for Outpatient Pharmacy use only. The *Auto Create Dosages* option will create the following Local Possible Dosages for the drug. (See Figure 3-11)

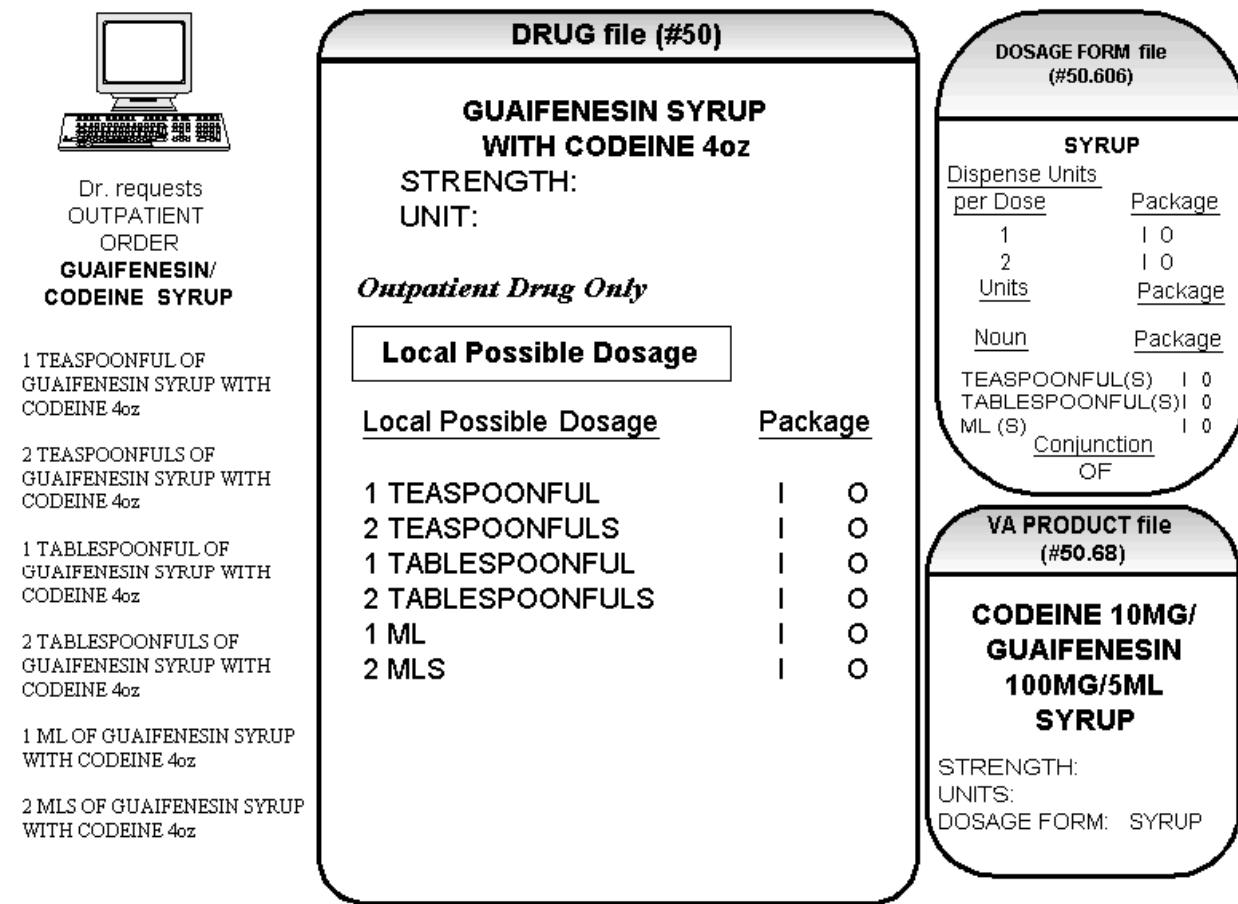

Figure 3-11: The *Auto Create Dosages* option will create these Local Possible Dosages for the drug

4.0 Creating the Sig

Earlier versions of the Outpatient Pharmacy software allowed the SIG to be directly edited from within the Outpatient Pharmacy package. Following the release of the Pharmacy Ordering Enhancements (POE) Phase 2 project, however, which included patches PSO*7*46, OR*3*94, PSS*1*38, and PSJ*5*50, the SIG could no longer be edited as a unit. Now, instead, individual fields are populated and then concatenated to create the SIG. Although the SIG, as a unit, cannot be edited, each individual field that creates the SIG can be edited until the SIG displays as desired.

Four basic types of SIGs exist: Simple Possible Dosages, Simple Local Possible Dosages, Complex Possible Dosages, and Complex Local Possible Dosages. The SIG for each of these types of dosages is created by combining fields from various PDM files. To simplify the process, each dosage can be thought of as having its own SIG “formula”. The key to the formulas is displayed in the following table. The formulas for creating each of the four types of SIGs follow.

The following table details the symbols that will be used in the SIG tables.

Table 1: Formula Symbols

Symbol	File	Symbol	File
	DOSAGE FORM file (#50.606)		MEDICATION ROUTES file (#51.2)
	DRUG file (#50)		ADMINISTRATION SCHEDULE file (#51.1) or MEDICATION INSTRUCTION file (#51)
	DRUG file (#50)		PHARMACY ORDERABLE ITEM file (#50.7) or Provider Comments entered with CPRS orders
	DOSAGE FORM file (#50.606)		AND, THEN or EXCEPT
	DOSAGE FORM file (#50.606)		HOURS, MINUTES, DAYS

SIG Formulas

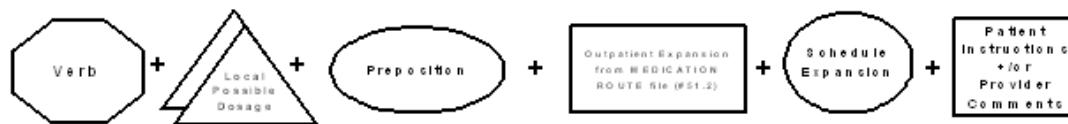

A.1.1

Simple Possible Dosages

A.1.2

Simple Local Possible Dosages

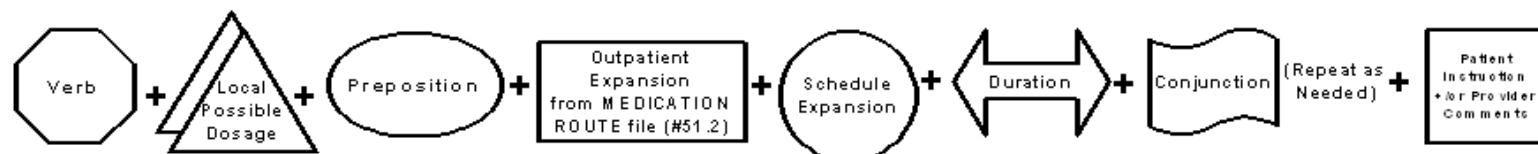

A.1.3

Complex Possible Dosages

A.1.4

Complex Local Possible Dosages

Note: Sites may wish to delete prepositions from the Dosage Form file using the Dosage Form File Enter/Edit option and include them as part of the Outpatient Expansion in the Medication Route file.

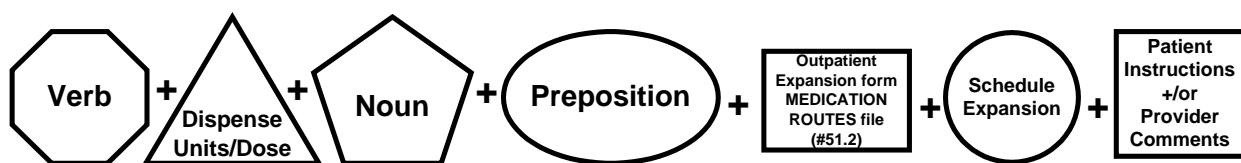

4.1 SIG Formulas

Each of the four types of dosages, Simple Possible Dosages, Complex Possible Dosages, Simple Local Possible Dosages, and Complex Local Possible Dosages, can be created using the dosage's respective SIG formula. The formulas, along with examples of various SIGs, are explained in detail below.

Simple Possible Dosages

Dosages that have a numeric dosage and numeric Dispense Units Per Dose appropriate for administration are called Possible Dosages. For a drug to have Possible Dosages, it must be a single-ingredient product that is matched to a VA PRODUCT file (#50.68) entry in the National Drug File. The National Drug File entry must have a single numeric strength and the Dosage Form/Unit Combination must be such that a numeric strength combined with the unit can be an administrable dosage selection. The formula for creating a SIG for a Simple Possible Dosage is displayed below. The charts following the formula define how various sample SIGs were created using this formula.

Simple Possible Dosage Formula

A SIG for a Simple Possible Dosage can be created utilizing the above formula. Prior to creating a SIG, the SIG must first be broken down into each of the elements in its respective Dosage Formula. The table below outlines each element of the desired SIG. By identifying the element symbol to the right of the SIG entry, it is easy to identify which element that word or phrase represents. For example, to the right of the SIG entry, "TAKE", in the table, the Verb symbol is displayed. By referencing the third column, it is apparent that Verb entries are taken from the DOSAGE FORM file (#50.606).

The following tables define each element of the SIG for each of the four types of dosages, Simple Possible Dosages, Complex Possible Dosages, Simple Local Possible Dosages, and Complex Local Possible Dosages and identify which files provide each element's information. The complete SIG is displayed at the top of each table.

Each part of the SIG is constructed by extracting data from a designated file within the Pharmacy software. The verb entry is derived from the DOSAGE FORM file (#50.606) entry of the Dosage Form that is associated with the Pharmacy Orderable Item. The Dispense Units Per Dose of 2 is a component of the Possible Dosage and is also provided by the software.

Example: Simple Possible Dosage

A.1 TAKE TWO TABLETS BY MOUTH EVERY 12 HOURS AFTER MEALS		
A.1.1.1 ENTRY	A.1.1.2 ELEMENT	A.1.1.3 FILE
TAKE		DOSAGE FORM file (#50.606)
2		DRUG file (#50)
TABLETS		DOSAGE FORM file (#50.606)
BY		DOSAGE FORM file (#50.606)
MOUTH		MEDICATION ROUTES file (#51.2)
EVERY 12 HOURS		ADMINISTRATION SCHEDULE file (#51.1) or MEDICATION INSTRUCTION file (#51)
AFTER MEALS		PHARMACY ORDERABLE ITEM file (#50.7) or CPRS

Note: Sites may wish to delete prepositions from the Dosage Form file using the Dosage Form File Enter/Edit option and include them as part of the Outpatient Expansion in the Medication Route file.

Required elements for every Possible Dosage are the Dosage (Dispense Units Per Dose and Noun) and the schedule. Any other element may be deleted from the SIG. If a SIG contains a medication route, and that medication route is changed or deleted, a new order will be created due to the change to the MEDICATION ROUTE field. A change to the dosage and/or schedule will also create a new order.

Example: Simple Possible Dosage

TAKE TWO TABLETS EVERY 12 HOURS		
ENTRY	ELEMENT	FILE
TAKE		DOSAGE FORM file (#50.606)
TWO		DRUG file (#50)
TABLETS		DOSAGE FORM file (#50.606)
EVERY 12 HOURS		ADMINISTRATION SCHEDULE file (#51.1) or MEDICATION INSTRUCTION file (#51)

The SIG of an order for a medication with Local Possible Dosages may contain the same elements as a Possible Dosage, except that the Local Possible Dosage replaces the Dispense Units Per Dose and Noun elements.

Example: Local Possible Dosage

EHR entered provider comments may be copied into the PATIENT INSTRUCTIONS field. These Patient Instructions will then print at the end of the SIG. If Patient Instructions exist at the Pharmacy Orderable Item level, the CPRS provider will view them when the order is being entered and can select whether or not to include them as part of the order. If the provider elects to not include the Pharmacy Orderable Item Patient Instructions as a part of the order, they will not appear in the PATIENT INSTRUCTIONS field of the pending order.

A.1 APPLY THIN FILM TO AFFECTED AREA TWICE DAILY AFTER WASHING THOROUGHLY		
A.1.1.1 ENTRY	A.1.1.2 ELEMENT	A.1.1.3 FILE
APPLY	Verb	DOSAGE FORM file (#50.606)
THIN FILM	Local Possible Dosage	DRUG FILE (#50)
TO	Preposition	DOSAGE FORM file (#50.606)
AFFECTED AREA	Outpatient Expansion from MEDICATION ROUTE file (#51.2)	MEDICATION ROUTES file (#51.2)
TWICE DAILY	Schedule Expansion	ADMINISTRATION SCHEDULE file (#51.1) or MEDICATION INSTRUCTIONS file (#51)
AFTER WASHING THOROUGHLY	Patient Instructions +/or Provider Comments	ORDERABLE ITEM file (#50.7) or EHR

The following Complex Local Possible Dosage would apply to a multi-ingredient liquid product, such as Mylanta or Maalox. In this case, 1 TABLESPOONFUL was entered as a Local Possible Dosage in DRUG file (#50).

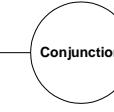

Example: Complex Local Possible Dosage

Entry	A.1.1.1 Element	A.1.1.2 File
TAKE		DOSAGE FORM file (#50.606)
1 TABLESPOONFUL		DRUG FILE (#50)
BY		DOSAGE FORM file (#50.606)
MOUTH		MEDICATION ROUTES file (#51.2)
EVERY FOUR HOURS		ADMINISTRATION SCHEDULE file (#51.1) or MEDICATION INSTRUCTION file (#51)
FOR 3 DAYS		IN DAYS, HOURS, MINUTES
THEN		AND, THEN, or EXCEPT
TAKE		DOSAGE FORM file (#50.606)
1 TABLESPOONFUL		DRUG FILE (#50)
AS NEEDED		ADMINISTRATION SCHEDULE file (#51.1) or MEDICATION INSTRUCTION file (#51)

The following complex order for a medication with Local Possible Dosages illustrates the elements utilized to build an order for a medication to be given for a specified duration before changing the frequency of administration. The CONJUNCTION field is used to join dosing sequences for a complex order. The entries are limited to "AND," "THEN," or "EXCEPT." "AND" is used for concurrent doses in a complex order, such as "Take 1 tablet every morning AND take 2 tablets at bedtime." "THEN" is used for consecutive doses in a complex order, for example "Take 2 tablets daily for one week THEN take 1 tablet daily for five days." "EXCEPT" can be used in a

complex order to describe any dosing order that is not routine, as in “Take 1 tablet every day EXCEPT take no tablets Wednesday.”

Example 1: Complex Local Possible Dosage

APPLY THIN FILM TO AFFECTED AREAS FOUR TIMES DAILY FOR 1 WEEK THEN APPLY DAILY AS NEEDED		
ENTRY	ELEMENT	FILE
APPLY	 Verb	DOSAGE FORM file (#50.606)
THIN FILM	 Local Possible Dosage	DRUG FILE (#50)
TO	 Preposition	DOSAGE FORM file (#50.606)
AFFECTED AREAS	 Outpatient Expansion from MEDICATION ROUTE file (#51.2)	MEDICATION ROUTES file (#51.2)
FOUR TIMES DAILY	 Schedule Expansion	ADMINISTRATION SCHEDULE file (#51.1) or MEDICATION INSTRUCTION file (#51)
FOR 1 WEEK	 Duration	IN DAYS, HOURS, MINUTES
THEN	 Conjunction	AND, THEN or EXCEPT
APPLY	 Verb	DOSAGE FORM file (#50.606)
DAILY AS NEEDED	 Schedule Expansion	ADMINISTRATION SCHEDULE file (#51.1) or MEDICATION INSTRUCTION file (#51)

5.0 Glossary

Term	Definition
Administration Schedule File	The ADMINISTRATION SCHEDULE file (#51.1) contains administration schedule names and standard dosage administration times. The name is a common abbreviation for an administration schedule (e.g., QID, Q4H, PRN). The administration time is entered in military time.
CPRS	A VA VISTA computer software package called Computerized Patient Record System. CPRS is an application in VISTA that allows the user to enter all necessary orders for a patient in different packages from a single application. It is similar to the IHS Electronic Health Record (EHR)
Dispense Drug	The Dispense Drug is pulled from DRUG file (#50) and usually has the strength attached to it (e.g., Acetaminophen 325 mg). Usually, the name alone without a strength attached is the Pharmacy Orderable Item name.
Dosage Form File	The DOSAGE FORM file (#50.606) contains all dosage forms and associated data that are used by Pharmacy packages and CPRS. The dosage form is used in SIG construction, default values and in the determination of the type of each dosage created for each application.
Drug Electrolytes File	The DRUG ELECTROLYTES file (#50.4) contains the names of anions and their cations and concentration units.
Drug File	The DRUG file (#50) holds the information related to each drug that can be used to fill a prescription or medication order. It is pointed to from several other files and should be handled carefully, usually only by special individuals in the Pharmacy Service. Entries are not typically deleted, but rather made inactive by entering an inactive date.
Drug Interaction File	The DRUG INTERACTION file (#56) is used to store DRUG-DRUG interactions. The file is sent out populated with interactions. These existing interactions cannot be deleted but their severity can be elevated. Locally defined interactions can be added.
Drug Text File	The DRUG TEXT file (#51.7) stores national and/or drug restrictions, guidelines, and protocols to help assure medications are being used according to defined specifications.

Term	Definition
EHR	An IHS computer software package called Electronic Health Record. EHR is an application with a graphical user interface to RPMS that allows the user to enter all necessary orders for a patient in different packages from a single application.
IV Additives File	The IV ADDITIVES file (#52.6) contains drugs that are used as additives in the IV room. Data entered includes drug generic name, print name, drug information, synonym(s), dispensing units, cost per unit, days for IV order, usual IV schedule, administration times, electrolytes, and quick code information
IV Solutions File	The IV SOLUTIONS file (#52.7) contains drugs that are used as primary solutions in the IV room. The solution must already exist in the Drug file (#50) to be selected. Data in this file includes: drug generic name, print name, status, drug information, synonym(s), volume, and electrolytes.
Local Possible Dosages	Local Possible Dosages are free text dosages that are associated with drugs that do not meet all of the criteria for Possible Dosages.
Medication Instruction File	The MEDICATION INSTRUCTION file (#51) is used by Unit Dose and Outpatient Pharmacy. It contains the medication instruction name, Outpatient Pharmacy expansion, and intended use, as well as other fields.
Medication Routes File	The MEDICATION ROUTES file (#51.2) contains medication route names. The user can enter an abbreviation for each route to be used at their site. The abbreviation will most likely be the Latin abbreviation for the term.
Medication Routes/Abbreviations	The Medication RouteS file (#51.2) contains the medication routes and abbreviations, which are selected by each Department of Veterans Affairs Medical Centers (VAMC). The abbreviation cannot be longer than five characters to fit on labels and the Medical Administration Record (MAR). The user can add new routes and abbreviations as appropriate.

Term	Definition
National Drug File	The National Drug File provides standardization of the local drug files. Standardization includes the adoption of new drug nomenclature and drug classification and links the local drug file entries to data in the National Drug File. For drugs approved by the Food and Drug Administration (FDA), medical facilities have access to information concerning dosage form, strength and unit; package size and type; manufacturer's trade name; and National Drug Code (NDC). The NDF software lays the foundation for sharing prescription information among medical facilities.
Non-Formulary Drugs	Drugs that are not available for use by all providers.
Orderable Item	An Orderable Item is pulled from the PHARMACY ORDERABLE ITEM file (#50.7) and usually has no strength attached to it (e.g., Acetaminophen). The name, with a strength attached, is the Dispense Drug name (e.g., Acetaminophen 325mg).
Orderable Item File	The ORDERABLE ITEM file (#101.43) is an EHR file that provides the Orderable Items for selection within all Pharmacy packages. Pharmacy Orderable Items are a subset of this file.
Pending Order	A pending order is one that has been entered by a provider through EHR without Pharmacy finishing the order. Once Pharmacy has finished (and verified for Unit Dose only) the order, it will become active.
Pharmacy Orderable Item File	The PHARMACY ORDERABLE ITEM file (#50.7) contains the Order Entry name for items that can be ordered in the Inpatient Medications and Outpatient Pharmacy packages.
Possible Dosages	Dosages that have a numeric dosage and numeric Dispense Units Per Dose appropriate for administration. For a drug to have possible dosages, it must be a single ingredient product that is matched to National Drug File. The National Drug File entry must have a numeric strength and the dosage form/unit combination must be such that a numeric strength combined with the unit can be an appropriate dosage selection.
Prompt	A point at which the system questions the user and waits for a response.
Standard Schedule	Standard medication administration schedules are stored in the Administration Schedule file (#51.1) and are commonly referred to as "Standard Schedules."

Term	Definition
Units Per Dose	The Units Per Dose is the number of Units (tablets, capsules, etc.) to be dispensed as a dose for an order. Fractional numbers will be accepted for certain dosage forms (i.e. tablets, oral solutions, etc.).
VA Drug Class Code	A drug classification system used by VA and IHS that separates drugs into different categories based upon their characteristics. Some cost reports can be run for VA Drug Class Codes.
VA Product File	The VA PRODUCT file.

7.0 Appendix B: Original Drug Text File Entries Combinations

The National Formulary Restriction Text is the original text exported with the DRUG TEXT file (#51.7) and automatically linked to the Drug File entries based on the VA Product match. No Orderable Item file entries were automatically linked with the DRUG TEXT file(#51.7). These entries can't be deleted, but will not display in EHR if they are not tied to a Pharmacy Orderable Item.

DRUG TEXT file (#51.7) Entry	National formulary Restriction Text
HYPERTENSION-VA/DOD	Refer to VA/DoD Hypertension treatment guidelines
SPINAL CORD,NEUROLOGY,REHAB	RESTRICTED TO SPINAL CORD INJURY,NEUROLOGY,AND REHABILITATION
HIV/AIDS	Refer to HIV/AIDS TAG treatment guidelines
DIABETES	Refer to PBM/MAP and PBM/TAG Diabetes treatment guidelines
CHF	Refer to PBM/MAP CHF treatment guidelines
GERD	Refer to PBM/MAP GERD treatment guidelines
PUD	Refer to PBM/MAP PUD treatment guidelines
COPD	Refer to VA/DoD COPD treatment guidelines
DIHYDROPYRIDINE CALCIUM ANTAGONISTS	Refer to PBM/MAP criteria for use of long-acting dihydropyridine calcium antagonists
HYPERLIPIDEMIA	Refer to VA/DoD Hyperlipidemia treatment guidelines
NEUROLOGY	RESTRICTED TO NEUROLOGY
SMOKING CESSATION	RESTRICTED TO SMOKING CESSATION PROGRAMS
BPH	Refer to PBM/MAP benign Prostatic Hyperplasia treatment guidelines
ATORVASTATIN	Refer to PBM/MAP criteria for use of atorvastatin
TROVAFLOXACIN	Refer to PBM/MAP criteria for use of trovafloxacin
THIAZOLIDINEDIONES	Refer to PBM/MAP criteria for use of thiazolidinediones
LANSOPRAZOLE	Refer to PBM/MAP dosing guidelines for lansoprazole
CELECOXIB	Refer to PBM/MAP criteria for use of celecoxib

DRUG TEXT file (#51.7) Entry	National Formulary Restriction Text
BECALPERMIN	Refer to PBM/MAP criteria for use of becalpermin
DEPRESSION	Refer to PBM/MAP Depression treatment guidelines
ALBUMIN	Refer to PBM/MAP guidelines for use of albumin
HYPERTENSION/CHF-VA/DOD-PBM/MAP	Refer to VA/DoD Hypertension treatment and PBM/MAP CHF treatment guidelines
HYPERTENSION/CHF/DIABETES	Refer to PBM/MAP Hypertension treatment and CHF treatment guidelines and PBM/TAG Diabetes treatment guidelines
HYPERTENSION-PBM/MAP	Refer to PBM/MAP Hypertension treatment guidelines
REVIEW	Class review in progress
HYPERTENSION/CHF-PBM	Refer to PBM/MAP Hypertension treatment and CHF treatment guidelines
ALZHEIMER'S	Refer to Pharmacologic Management of Cognitive Changes in Alzheimer's Disease
BPH/HYPERTENSION	Refer to PBM/MAP benign Prostatic Hyperplasia treatment and Hypertension treatment guidelines

8.0 Appendix C: Admin Schedules (Spanish Translations)

The Outpatient Language Modifications patch PSS*1*47 provides the functionality to print prescription labels in a language other than English. Enabling this functionality requires setting certain flags and completing several setup steps, including populating fields used for the Sig with equivalent terms in the specified other language. The following table provides Spanish equivalents for some of the more common Administration Schedules.

Note: translations in this table may require modifications for different dialects.

10.0 Appendix E: Local Possible Dosages (Spanish Translations)

The Outpatient Language Modifications patch PSS*1*47 provides the functionality to print prescription labels in a language other than English. Enabling this functionality requires setting certain flags and completing several setup steps, including populating fields used for the Sig with equivalent terms in the specified other language. The following table provides Spanish equivalents for some of the more common local possible dosages.

Note: The translations in this table may require modifications for different dialects.

LOCAL POSSIBLE DOSAGE	SPANISH LOCAL DOSAGE
0.05 MILLILITERS	0.05 MILILITROS

MED INSTRUCTIONS	EXPANSION	SPANISH EXPANSION
WOMK	WITHOUT DAIRY/IRON FORTIFIED PRODUCTS	SIN PRODUCTOS QUE CONTENGA LECHE O HIERRO

12.0 Appendix G: Medication Routes (Spanish Translations)

The Outpatient Language Modifications patch PSS*1*47 provides the functionality to print prescription labels in a language other than English. Enabling this functionality requires setting certain flags and completing several setup steps, including populating fields used for the Sig with equivalent terms in the specified other language. The following table provides Spanish equivalents for some of the more common medication routes.

Note: The translations in this table may require modifications for different dialects.

MEDICATION ROUTE	OUTPATIENT EXPANSION	SPANISH OUTPATIENT EXPANSION
BLADDER IRRIGATION	BLADDER IRRIGATION	IRRIGACION DE VEJIGA
BOTH EARS	BOTH EARS	AMBOS OIDOS
BOTH EYES	BOTH EYES	EN AMBOS OJOS
BUCCAL	CHEEK AND GUM UNTIL DISSOLVED	LA QUIJADA Y LA ENCIA HASTA QUE SE DISUELVA
CHEWABLE	CHEWABLE	MASTICAR Y TRAGAR
DEEP IM	DEEP INTRAMUSCULAR	INTRAMUSCULAR PROFUNDO
DENTAL	DENTAL USE	USO DENTAL
GARGLE	GARGLE	GARGARAS
GASTROSTOMY	GASTROSTOMY	GASTROSTOMIA
GASTROSTOMY TUBE	GASTROSTOMY TUBE	TUBO DE GASTROSTOMIA
INFILTRATION	INFILTRATION	INFILTRACION
INHALATION	INHALATION	INHALACION
INHALATION NASAL	NASAL INHALATION	
INHALATION ORAL	ORAL INHALATION	
INTRA-ARTERIAL	INTRA-ARTERIAL	VIA INTRA ARTERIAL
INTRA-ARTICULAR	INTRA-ARTICULAR	INTRA-ARTICULAR
INTRA-DYALYSIS	INTRA-DYALYSIS	INTRA-DYALISIS
INTRABURSAL	INTRABURSAL	INTRABURSAL
INTRACARDIAC	INTRACARDIAC	INTRACARDIACO
INTRACAVITY	INTRACAVITY	DENTRO DE LA CAVIDAD
INTRADERMAL	INTRADERMAL	DENTRO DE LA PIEL

MEDICATION ROUTE	OUTPATIENT EXPANSION	SPANISH OUTPATIENT EXPANSION
INTRAFOOLLICULAR	INTRAFOOLLICULAR	DENTRO DEL FOLICULO
INTRALESIONAL	LOCALIZED LESION	DENTRO DE LA LESION
INTRAMUSCULAR	INTRAMUSCULAR	VIA INTRAMUSCULAR
INTRAOCULAR	INTRAOCULAR	DENTRO DEL OJO
INTRAPERITONEAL	INTRAPERITONEAL USE	VIA INTRAPERITONEAL
INTRAPLEURAL	INTRAPLEURAL	INTRAPLEURAL
INTRASYNOVIAL	INTRASYNOVIAL	INTRASYNOVIAL
