FINAL SERVICES (Supplied No. 1941)

Indian Health Service 5300 Homestead Rd. NE Albuquerque, NM 87110

To: Director of IHS Maternal & Child Health Program IHS Area Chief Medical Officers IHS Area Immunization Coordinators Tribal Epidemiology Centers

From: Amy Groom, IHS Immunization Program Manager

Subject: Third Quarter FY 2009 Immunization Report (April 1, 2009 – June 30, 2009)

Date: September 18th, 2009

The Indian Health Service, Tribal and Urban Indian immunization programs report on the immunization status of American Indian and Alaska Native (Al/AN) children 3-27 months of age, 19 – 35 months of age, and Al/AN adolescents 13 – 17 years of age. These reports are submitted to the IHS Division of Epidemiology and Disease Prevention on a quarterly basis.

3-27 Month Old Report

The 3 – 27 month report is designed to help programs ensure timely vaccination and identify children who may be falling behind so they can be brought up to date. The criteria listed below are used to monitor coverage in the following age groups:

Age Group	Vaccines	Age Group	Vaccines
3-4 months	 DTAP1 IPV 1 Hib 1 Hepatitis B 1 (PNE1)[†] (ROTA1)[†] 	16-18 months	 DTAP 3 IPV 2 MMR 1 Hib 3 Hepatitis B 2 (Varicella)[†] (PNE4)[†] (ROTA3)[†]
5-6 Months	 DTAP 2 IPV 2 Hib 2 Hepatitis B 2 (PNE2)[†] (ROTA2)[†] 	19-23 months	 DTAP 4 IPV 3 MMR 1 Hib 3 Hepatitis B 3 (Varicella)[†] (PNE4)[†] (ROTA3)[†]
7-15 months	 DTAP 3 IPV 2 Hib 2 Hepatitis B 2 (PNE3)[†] (ROTA3)[†] 	24-27 months	 DTAP 4 IPV 3 MMR 1 Hib 3 Hepatitis B 3 (Hepatitis A1)[†] (Varicella)[†] (PNE4)[†] (ROTA3)[†]

[†] Not included in Age appropriate immunization coverage calculations

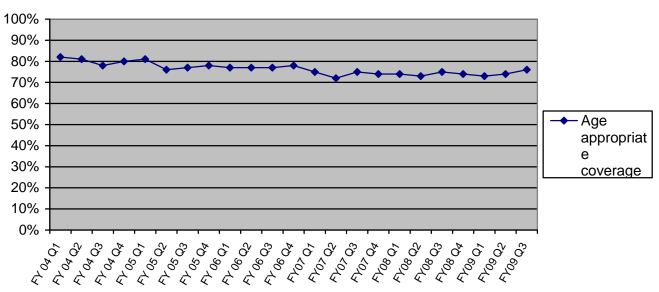

Pneumococcal conjugate vaccine (PNE), rotavirus vaccine (ROTA), varicella vaccine (VAR) and hepatitis A, though recommended, are not included in overall age appropriate coverage calculations. Data on PNE, ROTA, VAR and hepatitis A vaccine coverage are reported where available.

Summary

For FY 2009 Q3, 12 IHS Areas submitted immunization reports from IHS, Tribal, and Urban Indian health centers (I/T/U). This composite report provides information on the immunization status of 33,288 children 3-27 months old. Of these, 25,369 or 76% received all age-appropriate vaccinations compared to 74% (25,060/33,686) of children 3-27 months in the 2nd Quarter of FY 2009 [Figure 1]. Coverage by Area is included in the spreadsheet.

Figure 1

Two Year Old Report

The Two year old reports (children 19-35 months old) are used to monitor progress towards the GPRA childhood immunization indicator.

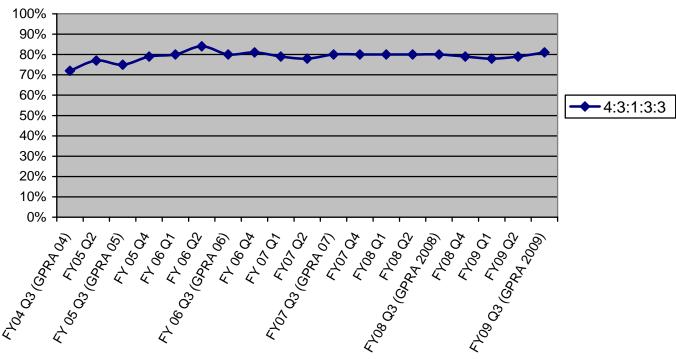

The 4:3:1:3:3 series (4 DTaP, 3 IPV, 1 MMR, 3 Hib, 3 Hep B) and 4:3:1:3:3:1 (4 DTaP, 3 IPV, 1 MMR, 3 Hib, 3 Hep B, 1 VAR) are used to monitor coverage in this age group; the HP 2010 and GPRA goal is 80% with these 2 series.

4:3:1:3:3 Series

For FY 2009 Q3 the 12 IHS Areas combined reported on 25,167 two year olds. Of these 20,398 or 81%, had completed the 4:3:1:3:3 series compared to 79% (19,844/25,078) in FY 2009 Q2. [Figure 2]. Coverage by Area is included in the spreadsheet.

Figure 2

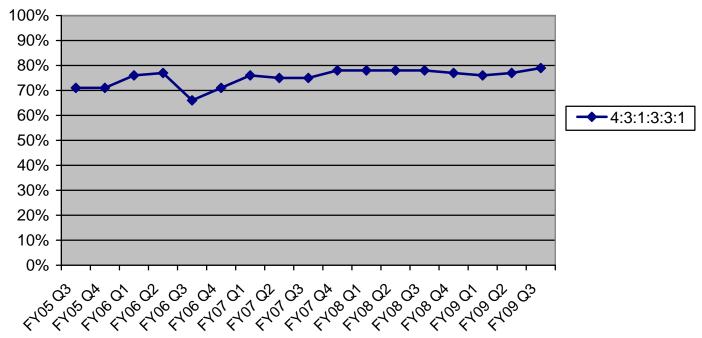

4:3:1:3:3:1 Series

In FY 2009 Q3, 79% (19,973/25,167) of two year olds had completed the 4:3:1:3:3:1 vaccine series compared to 77% (19,397/25,078) in FY 2009 Q2 [Figure 3]. Coverage by Area is included in the spreadsheet.

Figure 3

Adolescent Report

The Adolescent Immunization Report was collected for the first time in FY 2008 Q1. This report collects data on adolescents 13 – 17 years and is designed to monitor uptake of "recently" recommended adolescent vaccines (e.g. tetanus toxoid, reduced diphtheria toxoid and acellular pertussis [Tdap], meningococcal conjugate [MCV4], and human papillomavirus [HPV] vaccines) and monitor coverage in the adolescent population with the following recommended childhood vaccines: 1 dose of Td or Tdap, 3 doses of hepatitis B, 2 doses of MMR, 2 doses of Varicella/Hx of chickenpox. A summary of immunization coverage for 13 year olds and 13 –17 year olds with these vaccines is included below.

Immunization Coverage with Tdap and MCV4 for 13 year olds, Males and Females

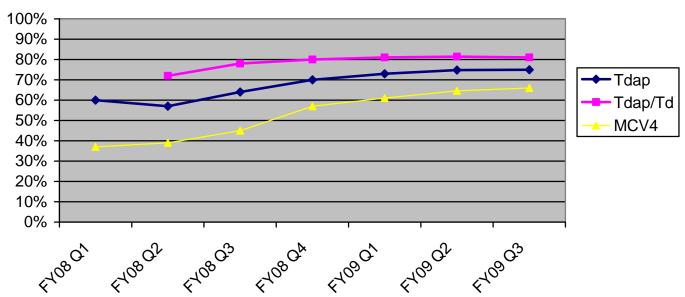

The ACIP recommendation for the routine administration of Tdap vaccine to adolescents was passed in June 2005. The ACIP recommendation for the routine administration of MCV4 vaccine to adolescents was passed in February 2005. The preferred age for the administration of these vaccines is 11 – 12 years of age.

For FY 2009 Q3 the 12 IHS Areas combined reported on 12,752 thirteen year olds compared to 12,364 thirteen year olds in FY 2009 Q2. Of those, 75% (9,613/12,752) had received 1 dose of Tdap vaccine, 81% (10,378/12,752) had received 1 dose of Tdap/Td vaccine and 66% (8,447/12,752) had received 1 dose of MCV4 vaccine. By comparison, in FY 2009 Q2 75% (9,251/12,364) of 13 years olds had received 1 dose of Tdap vaccine, 81% (10,063/12,364) received 1 dose of Tdap/Td vaccine and 65% (7,985/12,364) had received 1 dose of MCV4 vaccine. [Figure 4].

In FY 2009 Q3, coverage by Area ranged from 55% - 87% for Tdap, 58% - 91% for Tdap/Td, and 39% - 85% for MCV4. Coverage by Area is included in the spreadsheet.

Figure 4

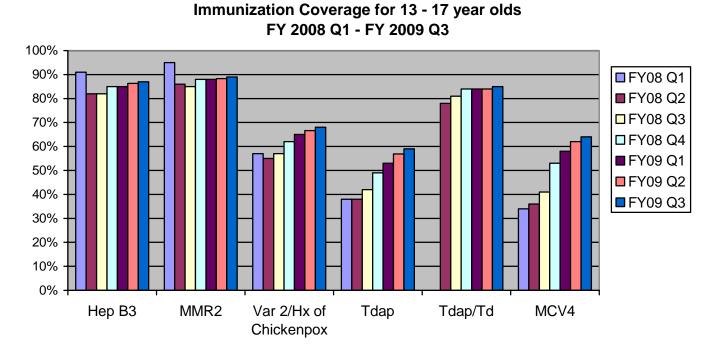

Immunization Coverage for 13 – 17 year olds, Males and Females

For FY 2009 Q3 the 12 IHS Areas combined reported on 62,833 13 – 17 year olds compared to 60,560 in FY 2009 Q2. Of those, 87% (54,421/62,833) had received 3 doses of hepatitis B vaccine, 89% (55,710/62,833) had received 2 doses of MMR vaccine, 68% (42,493/62,833) had received 2 doses of Varicella vaccine or had a documented history of chickenpox, 59% (37,369/62,833) had received 1 dose of Tdap vaccine, 85% (53,260/62,833) had received 1 dose of Tdap or Td and 64% (40,328/62,833) had received 1 dose of MCV4 vaccine. Coverage by Area is included in the spreadsheet.

For FY 2009 Q2, coverage for 13-17 years olds was as follows: 86% (52,251/60,560) with 3 doses of hepatitis B vaccine; 88% (53,494/60,560) with 2 doses of MMR; 67% (40,329/60,560) with 2 doses of Varicella or history of chickenpox; 57% (34,463/60,560) with 1 dose of Tdap vaccine; 84% (51,157/60,560) with 1 dose of Tdap/Td; and 62% (37,534/60,560) with 1 dose of MCV4 vaccine [Figure 5].

Figure 5

HPV Coverage for 13 – 17 year olds, Females Only

The ACIP recommendation for the routine administration of HPV vaccine was passed in June 2006. Routine vaccination is recommended for 11 - 12 year olds, with catch up vaccination for 13 - 26 year olds.

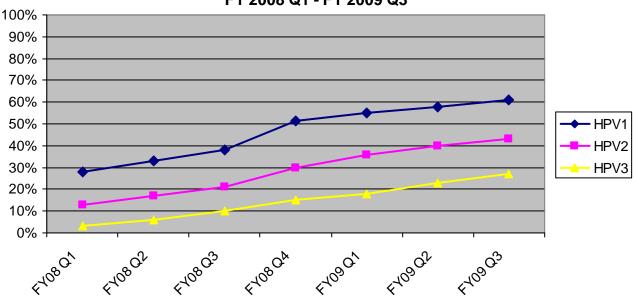

For FY 2009 Q3 the 12 IHS Areas combined reported on 34,424 females 13 – 17 years of age compared to 32,823 in FY 2009 Q2. Of these, 61% (20,922/34,424) had received 1 dose of HPV, 43% (14,813/34,424) had received 2 doses of HPV and 27% (9,347/34,424) had received 3 doses of HPV.

For FY 2009 Q2, 58% (19,013/32,823) of females received 1 dose of HPV, 40% (13,024/32,823) received 2 doses of HPV, and 23% (7,590/32,823) received 3 doses of HPV [Figure 6].

For FY 2009 Q3, Coverage by Area ranged from 49% - 87% for HPV1, 30% - 69% for HPV2, and 21% – 42% for HPV 3. Coverage by Area is included in the spreadsheet.

HPV Coverage for Females 13 - 17 years FY 2008 Q1 - FY 2009 Q3

Pediatric Influenza Report

Influenza vaccine has been routinely recommended for children 6-23 months since 2004. The first time IHS collected coverage on influenza vaccine for this group was in 2007. For this report, the number of children who were 6-23 months during the influenza season (Sept – Dec) and received at least 1 dose of influenza vaccine are reported.

For 2009, we received pediatric influenza reports from 12 Areas. These 12 Areas reported that of the 22,215 children who were 6 – 23 months of age between Sept – Dec. 2008, 9,012, or 41% had received at least one dose of influenza vaccine. Coverage ranged from a low of 25% to a high 54%; coverage by Area is included in the spreadsheet.

For 2008, 12 of the 12 Areas reported pediatric influenza coverage; overall, 51% (10,539/20,673) of children who were 6-23 months of age between Sept – Dec. 2007 had received at least 1 dose of influenza vaccine.

Influenza Coverage for 6-23 Month Olds At least 1 dose
