

MARCH IS NATIONAL KIDNEY MONTH

A healthy kidney removes wastes, toxins, and excess fluids.

Chronic Kidney Disease (CKD) is when kidneys are damaged and may cause health problems.

**CKD may NOT cause symptoms.
The only way to find out for sure if you have CKD
is through blood and urine tests.**

KIDNEY DISEASE CAN CAUSE:

**WEAK
BONES**

**HEART
ATTACK**

**HIGH BLOOD
PRESSURE**

STROKE

**KIDNEY
FAILURE**
